## Attention: Mr. Bill Fitzpatrick <br> School Board Chairman

Dear Sir:

## Re: Eastern School District, Facilities Review

We are pleased to present the final report for the Facilities Review for the Eastern School District.

This report has been prepared in accordance with the Terms of References provided.

The report is comprehensive in nature, driven by the complexities and relationships of the various components of the Eastern School District operation.

Flowing from the review are recommendations focused on providing direction to achieve the goal of providing the best possible educational opportunity for each student who attends school in the Eastern School District, within the financial resources available.

If we can be of further assistance in realizing recommendations set forth in this report, please do not hesitate to call.

Yours very truly,

Coles Associates Ltd.
Per: Howard S. Coles, M.R.A.I.C., P.Eng. Vice President

# EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW 

## EXECUTIVE SUMMARY

The mission statement of the Eastern School District is:

The Eastern School District is committed to excellance in education. In partnership with the community, we will provide a safe and caring learning environment in which all students have the opportunity to reach their potential and to face the future with confidence.

- It has become apparent to the Eastern School Board and Provincial Government that financial resources are limited. It is a fact that the Eastern School Board operates with an annual deficit. To continue on the current financial course is not an option. As a result, this Review was commissioned in an effort to identify realistic options for corrective action, available to the Board.

As a guiding principal, consistent with the mission statement and in the context of financial reality, the authors have undertaken this Review bearing in mind the objective
to provide the best possible educational opportunity for each student who attends school in the Eastern School District within the financial resources available.

- As a result of this Review, we have become aware that we have between 2500 and 3000 seats available for students in the Eastern School District that are not utilized. Simply put, the school buildings are under-utilized. Unfortunately, a large number of these seats are not located where the student population now resides. Many of the space related issues can
be improved in conjunction with transportation adjustments.
- A number of space requirements have been identified which require attention. Longer-term solutions to identified inequities will require additions to existing buildings.
- While the Eastern School District has some buildings that are in substandard condition, the general condition of our buildings is good. Recommendations are made to correct deficiencies.
- Through the review process, issues relating to the operation and maintenance of the school buildings have been identified for improvement. The purpose of the buildings is to serve the needs of the education program. Recommendations are made to enhance the performance of the building and its systems, thereby freeing additional dollars for program related requirements.
- The transportation system and allocation of students to schools has become cumbersome, inefficient and unnecessarily costly. The bus service can readily be improved in conjunction with school zoning in order that the maximum of financial resources may be directed to the students in school and not getting them to school. This Review has identified areas in the transportation system where significant financial savings can be realized immediately with no negative impact on classroom resources.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

- Our school system must addressed the need to provide the resources necessary to develop essential skills required to respond to a rapidly changing world. In order that a school be in a position to offer a cost effective, basic program, a minimum enrollment at each school is required. While most schools are of sufficient size, a number do not allow for cost effective use of staff and resources.
- Early in the Review it became apparent there was no effective tool which allowed for reliable planning. As a means to gain control of demographic data for planning purposes, a computer software program capable of recording and identifying options for trends in student demographic data was purchased. This software allows identification of students in the Eastern District, where they live and where they go to school. The continued updating of this data set will enable the Eastern School District to plan with confidence the physical resources and transportation needs, looking into the future, for at least a five year period. This program is also engaged to provide routing information for the transportation system.
- The situations that now exist in this District have come about as a result of many decisions made over the years, although the Eastern School District has only been in existence for $21 / 2$ years.
- This Review is not seen as an end point, but rather the beginning of on-going process to better monitor and control all facilities required in order to provide cost-effective support services necessary to the effective education of our children.
- This Review has been greatly assisted by the complete cooperation of all Eastern School District employees. It is clear from the meetings, discussions and input provided by all partners in the education process that every effort should be made to protect and enhance the opportunity for the students in our classrooms.
- The recommendations in this Review address these identified concerns and provide a realistic and achievable avenue that enables the goal to become a reality in the short term.
- The recommendations put forth in this Review also offer a responsible process whereby this District can begin to deal with the inefficiencies that have been identified. All present school jurisdictions within the District will share in this process to bring to our students a better opportunity for learning.

## ACKNOWLEDGEMENT

Jim MacAulay and Coles Associates Ltd gratefully acknowledge the time and commitment extended by the principals of the schools in the Eastern School District to conduct tours of the schools and to respond to interviews.

We would also like to thank the administration and staff of the Eastern School District for their time to provide background information and resources necessary for this Review.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## PURPOSE OF THE FACILITY REVIEW

The Eastern School District is currently operating at a financial deficit. The District has been advised by the Provincial Government that no additional funds are available to cover the deficit. Where it is the goal of the Eastern School District School Board to provide the best possible educational opportunity for each student who attends school in the Eastern School District within the financial resources available, operational inefficiencies are a prime sector to explore with a view to reducing unnecessary costs.

The small school assistance program which was introduced in 1989-90 was totally phased of in 199596. Beginning in 1991-92 the school board operating budget was subject o budget reductions each year using the budget of July 1,1990 as the base budget. These two factors meant that the board hd to operate significantly with less dollars each year. Th tables below indicate the actual reductions in each area since the 1990 school year.

## Small School Assistance Revenue

| $1989-90$ | $\$ 337,000$ |
| :--- | :--- |
| $1990-91$ | $\$ 362,900$ |
| $1991-92$ | $\$ 321,500$ |
| $1992-93$ | $\$ 276,300$ |
| $1993-94$ | $\$ 142,000$ |
| $1994-95$ | $\$ 72,600$ |
| $1995-96$ | $\$$ |

Eastern School District Budget Reductions Base Budget Year July 1, 1990

| $1991-92$ | $\$ 154,100$ |
| :--- | :--- |
| $1992-93$ | $\$ 114,400$ |
| $1993-94$ | $\$ 345,300$ |
| $1994-95$ | $\$ 776,900$ |
| $1995-96$ | $\$ 1,208,500$ |
| $1996-97$ | $\$ 891,500$ |

It is appropriate to undertake a review to identify operational opportunities for cost savings which would not affect classroom resources which in turn would have a negative impact on the education of our students.

The demographics of the District have changed over the past several decades since many of the 43 schools were put into service as have the effective catchment areas for each of the schools.

It is appropriate to review the current demographics of the District, to project trends in the short term demographic data and to put the demographics in the context of the existing school locations, their capacity to provide the necessary space and services to the student population and the efficiency and ability of the transportation system to respond in a cost effective manner to the District transportation needs.

The operation of the Eastern School District requires the complex management of physical facilities
(school buildings), student demographics, curriculum, professional and support staff and transportation systems. There are inter-related relationships between many of these requirements which cannot simply be looked at in isolation.

It is appropriate to review the facilities including student demographics, transportation and physical facilities in the context of each other to identify related problems and pose realistic and achievable solutions.

The relationship between the mode of transportation to schools, the size and location of schools and the size and location of the student population has over the past decades and will continue to evolve.

It is appropriate to review the transportation system with a view to rationalizing the network in order to offer a cost effective service.

Building maintenance and operational expenses are a critical to the successful operation the Eastern School. At present the District operates in excess of two million square feet of building area.

It is appropriate to undertake a review of the school facilities in order to identify potential building operational inefficiencies. In the long term it is important to understand the overall condition, usage and operational costs of the facilities in order that appropriate planning and financial resources can be identified so as to minimize operational expense.

Regulations, codes and building standards governing the construction of architectural, structural, mechanical and electrical systems for school buildings have changed dramatically over the life span of many of the buildings under review.

In making the decision of whether to proceed with upgrading a building to the existing condition the buildings and its functional role in the overall network of schools must be considered. Conversely,
in evaluating the network of schools for ongoing service it is important to ensure each school is sound and suitable for ongoing service.

It is appropriate to undertake a review given the varied ages of the District buildings, in order to identify and document the existing condition of the various systems making up the buildings, to put this information in the context of the current needs and to present the capital cost implications of undertaking any corrective measures which may be necessary to maintain the integrity of the building envelope and systems.

The facilities which are the focus of this study and report are collectively the forty three school buildings and the supporting transportation network comprising the Eastern School District.

This report does not deal with issues of curriculum, the French Immersion (District) Program, provision of grades offered at each school, future building planning or programming or other related issues. The complexity of introducing such topics to a report of this nature would prove too complex. Such topics are better left to separate study and can readily be undertaken in such a manner without compromising the integrity of this review.

This document should be viewed as the beginning of an ongoing planning process, not the final resolution. In a world of constant change it is vitally important to have a vehicle to monitor the ever changing composition of the school system, to establish real data sets with which to plan a future and to establish measurable criteria against which to judge progress which offers to our children the greatest possible opportunity within our financial resources. This offers the rationale for such a beginning as well as a broad structure for ongoing review and development.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## TERMS OF REFERENCE

It has become increasingly clear to the Eastern School District that it is facing a broad range of challenges relating to improving the effectiveness, efficiency and economics involved in operating its 43 schools.

With regard to the current financial situation of the Eastern School District, Jim MacAulay in association with Coles Associates Ltd. were commissioned by the Eastern School District to undertake a Facility Review and Report preparation under the direction and control of the Eastern School District.

The Review was to identify the strengths and shortcomings of the present facilities in terms of physical features as well as the capacity of the facilities to deliver authorized programs and services. The study was also to identify alternate school arrangements with a view to establishing the most effective, efficient and economical delivery of educational programs and services.

This Review and Report has been conducted in accordance with the Terms of Reference prepared and issued by the Eastern School District and dated 1 May 1995.

In summary, the terms of reference identified the requirement:

- To study and report to the Finance and Operations Committee on the following matters:
- To collect information on existing school facilities including:
- Present, optimum and capacity enrolment,
- Projected enrolment for 5 years,
- Building size, age, recent renovation or capital projects,
- Projected renovations or capital requirements,
- Operating and maintenance costs, - Building code standards, including handicapped access,
- Adequacy for program delivery,
- Safety.
- To identify community development and demographic patterns in the areas currently served by the schools.
- To identify alternate school facility arrangements keeping in mind the requirement for the effective, efficient and economical delivery for educational programs and services.

## FACILITY REVIEW PRINCIPLES

During the development stages of the Review and in order to maintain focus on the task at hand, the authors identified six specific guiding principles:

1. To attain fair and equitable student access to programs, facilities and resources throughout the District,
2. To attain efficient and economical use of the transportation service,
3. To attain efficient and economical use of school buildings,
4. To establish clear and definitive school boundaries,
5. The maintain the integrity of the "family of schools" concept and
6. To establish a tool to provide an effective means to gain control of student demographic data for planning purposes.

# EASTERN SCHOOL DISTRICT 

FACILITY REVIEW

## APPROACH

## METHODOLOGY

This review and report were prepared by conducting research into in a number of information sources.

A tour of each of the schools was conducted together with an interview with each of the principals. The tour was not intended to be a detailed inspection of each of the buildings but rather a general review of each of the major building systems within each school in order that its condition could be placed in the context of a suitable environment for the delivery of the school program and a broad understanding of major deficiencies in the physical plant.

Historical financial data was collected from the Eastern School District and input into spreadsheet and graphical format for evaluation and presentation.

The need for accurate demographic data became immediately apparent early in the study. As a result the Eastern School District purchased a computer program to allow for data collection and presentation in tabular and graphic form. The output from the Geoscope program was organized by schools and is presented in Appendix A.

Based on the site review, financial data and demographic data a summary for each of the schools was prepared and is presented in Appendix A.

Basic school and financial information was collected and is presented in Appendix B.

Graphical information was developed from collected demographic data and financial and is presented in Appendix C.

## STRUCTURE OF THE REPORT

There is a large quantity of information, concepts and data provided in this report. Every effort has been made to present the information in a as straight forward and understandable manner as possible. Wherever possible, the information is presented in graphical format for quick understanding and comparison.

For rapid reference, the salient sections of the report are

Background including:
Terms of Reference
Purpose of the Review
Introduction
Discussion including:
Discussion
Explanation of Data
Presentation of Information in Appendices:
School Summaries
School and Financial Data
Graphs
Maps
Policies

## QUALITY ASSESSMENTS

Quality assessments and comments relating to the quality of building conditions in this report are subjective and are based upon considerable practical experience of the writer in both preparing
reports of this nature and building construction and renovation. Further comments are dependent on a number of criteria prioritized in three levels.

The first level of assessment is contingent upon the need for some particular component or system to maintain its integrity as a strategic component of the weather envelope, health or life safety systems or upon effecting the necessary repair or replacement of an element to prevent further ongoing structural, architectural, mechanical or electrical deterioration of this and other components or systems within the complex. Items in these category are considered immediate in nature and should be undertaken within one year. Items identified as such are noted as Priority One.

The second level of assessment relies on subjective evaluation of elements with respect to their need for maintenance, repair, refinishing, or replacement, in order for the elements in question to maintain an appropriate level of service as determined by the writer. This level also considers items which of necessity will require some practical period of planning before implementation. The time period for this level is one to three years. Items identified as such are noted as Priority Two.

The third level indicates longer term, low priority items. These items should be completed within a three to six year period. Items identified as such are noted as Priority Three.

## IMPLEMENTATION OF RECOMMENDATIONS

No specific strategy has been developed to implement the conclusions drawn from this report. This is left to the jurisdiction and action of the Eastern School District Board of Trustees.

The development of any specific programme for facilities recommended in this report is also outside the scope of this Review.

# EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW 

## DISCUSSION

## HOW THINGS CAME TO BE

In a study of this nature, a historical review provides useful perspective. Until the late 1950's and early 1960's education in Prince Edward Island was primarily provided by small, one-room, community schools. Frequently a farmer provided in a corner of one of his fields, sufficient space for the school building and its playground. Each of these structures and its administration was an entity unto itself. In many of our communities, this model served very well for the social, economic, technological and demographical climate of the day. Many very prominent citizens emerged from these institutions.

By the late 1950's and early 1960's, however, citizens recognized that this model had served its time and the complexity of the educational process required a different organization. Regional high schools, consolidated elementary and junior high schools began to take shape on our landscape. Over time previously separate school boards were consolidated into larger units. This usually resulted in enlarged school boards from the old three trustee models that prevailed during the one room school era.

In 1972, another structure was put in place by the government of the day which introduced the unit model that existed until 1994. At this time our school boards were reduced to five and a more centralized approach was taken to our curriculum.

During the 1970's and 1980's new curriculum was advanced and schools gradually took new focuses.

Buildings which had been put in place for various reasons and with no comprehensive planning for the future began to find that enrollments were dwindling. Indeed, in many cases, enrollments have decreased to one-half or less of the enrollment that existed when some of the schools were built.

At this same time our schools began to offer an expanded curriculum. An expectation was established that schools could provide whatever program was required by the individual student. We have all come to expect that students stay in school longer to prepare for a rapidly changing world.

## SCHOOL SIZE

The research findings on optimal school size are at best ambiguous. While much of the literature suggests that a school size of approximately four hundred for elementary and seven hundred for secondary schools is optimal, there is by no means any consensus on this topic.

The literature suggests that when looking at new schools or restructuring existing schools, policy makers should first define the basic program desired by a particular educational community along with the cost society is prepared to pay and the taxpayer can afford. Any option considered must address how the size of the school promotes the best possible learning opportunities for students.

It is the area of this relationship between school size and student achievement where no definitive data

# EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW 

can be found to support informed recommendations on optimum school size.

Our school system must addressed the need to provide the resources necessary to develop essential skills required to respond to a rapidly changing world. In order that a school be in a position to offer a cost effective, basic program, a minimum enrollment at each school is required. As an example, many of our students require services such as guidance, resource help, and library. Schools that are forced to have more than one grade in a classroom are not in a good position to offer a full range of minimum services. Over the years all school boards have been very conscious of the needs and have made a valiant effort to provide services on an equitable basis. In many cases this has resulted in many services being offered on a percentage basis in numerous schools. While most administrators and teachers will agree that this is better than none at all, the vast majority agree that it is much less than ideal.

If one investigates school size over the past fifty years, many school sizes put forth as ideal. At one time people felt that very large schools were the answers. Before long problems which surfaced led to a change of thinking and understanding that schools could be too large to manage. In our province the "too large" has not posed a problem as we are simply too rural to have schools that hold thousands. We do, however, have to consider the point at which our schools become too small in enrollment to offer what we consider today as minimum programs and services.

People have always had a difficult time breaking with tradition. However, we must make the best use of our resources to balance our budget and provide the best possible opportunities for our students. When situations such as this have come about in the past it invariably took a short amount of time before both parents and students made the adjustments and became satisfied with the results. One has only to refer to the recently published "Economic Development Strategy for Eastern Prince

Edward Island" to recognize how important basic education is to the region. The Eastern School District Board wants the best possible education for each and every study within its jurisdiction. It is with this basic goal in mind that the authors of this report put forth the following comments and recommendations.

Under our present system, it would appear that an enrollment of approximately two hundred students would provide the staff that we consider sufficient to offer the basic program that we have come to expect in today's society. Two hundred students would qualify a school for about eleven staff positions. Eight of these positions would be used in the traditional manner to offer instruction in the basic subject areas. The remaining three positions would be utilized by the school to provide the specialist services mentioned previously. All schoois might not wish to offer exactly the same time in each area of curriculum. A particular school might, at any given time, have a need for greater time in resource work. With personnel readily available in the school, this could be accomplished. As the needs of an individual school shifted, the available staff could be used to fill the new needs. The determination of these needs would be the responsibility of the principal and staff of the school.

Under our present system, we expect specialist staff to serve up to four different schools. While the people who are performing these roles are dedicated and very conscientious they are physically unable to be everywhere at the same time. Most of these people do not feel that they are part of any particular school and indeed the school staff often has the same opinion. This leads to our students receiving less attention from our specialists. The erratic schedule these specialists must follow makes it virtually impossible for them to become involved in extracurricular activities. As such a great social benefit is lost.

In some cases this situation also leads to teachers providing instruction in a basic curriculum also serving more than one school. This situation has the

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

same effect with these people that it has with our specialist teachers. Certainly a situation that would provide for as many staff as possible serving only one school would be very desirable.

## TRANSPORTATION

When consolidation took place at both the senior high and elementary levels, it was accomplished by combining schools that served the various districts of Prince Edward Island. The original schools had been built in locations to allow a suitable walking distance for pupils to attend each individual school. Consolidation now required a bus service to transport students greater distances to school. Rather than redefining school zones based on a bus mode of transportation, consolidation merely utilized a network of existing schools located for foot transportation. The transportation system resulted in many busses going to dead ends and then backtracking over highway already covered. During the time when fuel, drivers, and maintenance were relatively cheap, this was not of concern. Today, however, these costs are no longer cheap and our dwindling education dollar is not able to meet these costs any longer.

The time has come when we have to look at the catchment areas that are served by each of our schools with an intent to providing the most efficient and economical transportation system possible. During the review of the Eastern School District, numerous areas were identified where new strategies may be implemented which will vastly improve our transportation system. In these cases some families will find themselves in zones which will result in their children attending new schools.

## FAMILY SYSTEM OF SCHOOLS

The Eastern School District has six families of schools designated by the regional high school that serves the area. This report has made every effort to maintain the integrity of the family of schools concept, to ensure that students attend elementary, intermediate and high school within the same school family. This allows for six distinct bussing and planning areas in our district. The
authors feel that this structure will make it easier for principles within each respective family to engage in co-operative planning in areas of common interest including bus routes and school events. Moreover it will provide for and support the coordination of programs that best meet the changing needs of the students. This approach promotes communication and interaction between sending and receiving schools.

Intermediate and Senior High Schools will be accommodated by assigning the graduate from our elementary schools to these institutions. There is one exception in the "family of schools" concept in this regard. Due to the quantity of students it is not possible to completely retain this integrity in regard to the intermediate and high schools in the Charlottetown area. Birchwood, Queen Charlotte, Stonepark, Charlottetown Rural and Colonel Gray are recommended for major re-zoning due to the re-zoning of the schools from where they receiver their students.
Through the development and analysis of the review process, it became obvious that the senior and intermediate schools were located in reasonable proximity to the student populations and that their respective capacities responded reasonably well to the current student population.

An attempt to remove either a senior or intermediate school from the system would cause over utilization of the balance of schools at these levels.

For reference the families of schools are noted below.

## STUDENT POPULATIONS

The mobility of student populations is difficult to predict and control. The ease of mobility of students relative to a fixed building has and will continue to cause vigilant monitoring by the Eastem District. For optimum usage, it is ideal to have schools available in close proximity to the major populations. This is more readily achievable in urban settings than in rural settings. It would be ideal to have a utilization rate in the vicinity of $85 \%$ to $90 \%$ for each school. This would minimize the per student cost to the District while still allowing for the necessary flexibility.

## ZONING

Over the past number of years, various zoning have been in place in the schools within the present City of Charlottetown. Changing population patterns have necessitated changes in attendance zones. The advent of French Immersion (the District Program) has also influenced where pupils attend school at the elementary and intermediate school levels. Attendance zones were established some time ago and over time, various adjustments have taken place. At present, students living in a particular zone may choose to attend two or more different schools. As construction dollars became less available, schools were not built on the outskirts of the City to accommodate communities such as Brackley, Hillsborough Park or Winsloe. Students from these communities are bussed to City schools wherever room was available.

At present, students are able to and do attend each of the city schools. This situation makes it impossible for planning and makes the bussing system cumbersome, redundant and expensive. As we look to the future, more important valuable dollars are being spent, not on bettering the educational resources and opportunities of our students, but simply on getting them to school.

The recommended reorganization of the school zones within the City areas is designed to correct this situation. The attendance zoning is identified and fixed for each school. The new transportation policy clearly identifies parameters for student

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

transportation to and from school. The proposed zoning within the City optimizes the bus system, reduces cost and strives to establish standards thereby ensuring that zoning and related bussing do not get ouf of hand.

Accountability in our society isan increasing concern as it relates to the use of public resources. Accountability in the Education System includes dollars spent and resources purchased. The proposed rezoning arrangements for the City schools addresses both these issues. While it is relatively easy in rural areas to identify busses and schools that are no longer required, it is much more difficult to pinpoint busses in the city area. The new zoning will require new bussing arrangements. The new transportation policy will require fewer busses to transport the students. The new zoning is designed to make bussing as efficient as possible.

We are now able to locate all our students with the Geoscope computer software. We are also able to account for those children who will start school over the next five years. This new re-zoning model will be monitored each year so that, should major shifts take place in our student population, we will be able to plan at least three years prior to the children entering our school system.

## STANDARD OF EXPECTATION

During the building review process and interviews, the writers gleaned some sense about the level of expectation for the school buildings. Consistent with the writer's evaluation of quality was the notion that overall the buildings are in good condition. However, schools including Grand Tracadie, Fort Augustus and West Royalty fell far short of a reasonable standard of quality and amenities.

Also sensed was an understanding that the task before the District was one of optimizing resources and minimizing waste in order that the greatest schooling opportunity may be provided to the students.

The level of expectation can be categorized as realistic and reflective of the current budgetary constraints recognized within the school district. Basic to the comments expressed by most principals was a need for proper school cleaning, ventilation for interior spaces and a quality of window sufficient to keep the elements out. There was also a recognition in most instances that a number of schools were designed as open concept schools and over the years partition walls have been constructed to enclose formal classrooms. In the process of enclosure ventilation systems were disrupted by not providing adequate air to internal spaces and in some instances internal spaces were created with no access to windows.

## FUTURE PLANNING

A detailed investigation into programming and planning issues is outside the scope of this review, however, an important bi-product of this Facility Review is its implication for future planning of any future building construction or renovation. A number of clear directions are evident from the financial and physical information collected. While these may seem self-evident, it is important to outline these for future reference.

The average area per student for existing schools provide reasonable guidance for future schools.

The material selection of interior finishes plays an important role in the ultimate quality of the interior environment and cleaning and maintenance costs. Hard surfaces are more appropriate as a rule.

Control systems for mechanical system provide greater potential to monitor and control operational costs.

Building envelope material selection and detailing is critical both in providing initial weather protection and ultimately in minimizing the long term operational and maintenance costs.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## SCHOOL BUILDINGS

The operation of the Eastern School District requires the complex management of physical facilities (school buildings), student demographics, curriculum, professional and support staff and transportation systems. The delivery of the total program must be provided within a fixed annual budget.

Within these various components are a mixture of dynamic and relatively static elements. Static elements are typically the fixed buildings. The dynamic elements are student demographics, curriculum, staff and transportation elements. It is important to understand and put into the context of the dynamic elements, comments relating to the static fixed buildings.

It is the purpose of the fixed buildings to provide appropriate space, services and amenities to serve the school program both in its current state and as the various components evolve.

The design life of a building is considered to be approximately twenty-five to thirty years. With proper maintenance and timely refurbishing, renovation and/or addition to an existing facility, many buildings are able to extend their total life to much greater than this time frame. While the buildings remain relatively static over a period of two to three decades, many changes may occur in the overall structure of the school delivery system. Significant to this review is the history and evolution of the school building program in Prince Edward Island as outlined in the introduction to this report.

As noted previously transportation played a major role in the evolution of the design and construction of school buildings. During the 1940's the one-room school was ubiquitous in response to the then current mode of transportation. Schools were located so that students could generally walk from their homes.

Through the years of 1970 to 1985 the school systems underwent consolidation. Larger buildings replaced
numerous smaller buildings. Consolidation buildings were now responding to wider catchment areas in part made possible by advanced modes of transportation. New schools were constructed in locations not through a rationalization of economic transportation routes and demographic projection, but rather their locations were based on the original school districts. Foot transportation in a large measure determined our current school locations and inefficiencies.

In addition to the issue of school location and transportation, construction technology also underwent major developmental changes over the past decades. During the pre-development years of 1970 to 1985, rural schools were primarily constructed of wood frame. Larger urban schools were constructed of steel frame and unit masonry used either singly or in combination. The significant characteristic of these early buildings is their ability to eliminate air infiltration was far from current day standards and their obvious lack of mechanical and electrical systems relative to the most recently constructed schools.

The development program saw two styies of schools construction. The earlier schools constructed were similar in technology to the early unit masonry buildings. About half way through the development program, technology changed with the addition of a parging over the exterior of the concrete block course. Although not up to the air barrier technology of today, this was a significant improvement to the air infiltration volumes. At the same time, ventilation systems were now beginning to be introduced into schools.

Coincident with this change in construction technology was the impact the energy crisis was having on the design of buildings in general. Prior to the energy crisis the rates of ventilation were high. During the years of the energy crisis ventilation rates as identified by ASHRAE were dramatically reduced. This reduction in design ventilation rates coupled with the "natural ventilation" reduction caused by better seals to air infiltration through the application ARCHITECTS and ENGINEERS

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

of parging caused significant reductions to the total ventilation rates available to buildings.

As the energy crisis came to an end, improved technology in ventilation equipment, improved synthetic air barriers, improved detailing for air seals and increased design ventilation rates allowed for overall improvements in total ventilation with unprecedented control potential over mechanical systems.

The negative impact of the development of building envelopes and ventilation systems is that education for system operators has not kept pace with their installation. Operation and maintenance cost escalated dramatically and poorly maintained systems became one of a number of sources of problems related to indoor air quality.

## SCHOOL MAINTENANCE

Basic to the understanding and successful operation of some two million square feet of building area, is that maintenance of building materials and systems is crucial.

Despite their seemingly static condition, building materials and building systems deteriorate. Wood rots, concrete cracks, steel rusts and machinery eventually grinds to a halt. It is necessary to repair, renovate and, finally, replace. Ideally, once a building has been constructed there must be provision for adequate maintenance funds and training to ensure the buildings remain safe and efficient structures. Typically funding for maintenance is far less than adequate. The result is that physical plants and equipment are not being properly maintained or replaced. If this state of affairs is permitted to continue, the deterioration will ultimately become reversible only at an unacceptable cost.

On a relatively large stock of building such as in the Eastern School District schools, there is a cross section of building ages and construction types which should imply a relatively stable average cost for building maintenance. This is not reflective of an
amount which has been spent in past years but what should have been spent to address repair needs. The major system repairs, where they are present, include re-roofing, re-pointing of brick, replacement of siding, flashings, windows, exterior doors, ventilation system, motors, lighting, and interior doors and hardware, flooring, pavement. The frequency of replacement and/or repair to any given component is variable and dependent on a number of criteria, including usage, maintenance, exposure, service conditions and quality or original component. It is virtually impossible to plan within a precise timetable which components must be repaired or replaced. Further, with such items as roofing, very often the roof may be repaired numerous times before it is replaced in its entirety. Traditionally, the components are allowed to deteriorate to the point where secondary items, (adjacent items), begin to become affected. To a large degree proper maintenance is impacted by the financial resources available.

In general terms, the major components noted above can be expected to be replaced once in a fifteen to twenty year cycle. It is desirable to allow financial planning and money set aside, annually, to have these components replaced as required. In an ideal world, the budget process should allow for this inevitability.

A number of principles can be stated with respect to the maintenance of buildings.

1. Program of regular maintenance must be established to quickly reinstate damaged or worn items on a regular basis. Psychologically, a well maintained building is better respected by its users and is not so frequently damaged as is a building not maintained.
2. It is essential to have competent, knowledgeable and well trained staff responsible for maintaining the building and systems. School buildings, and particularly the more recently constructed buildings, are everincreasing in mechanical, electrical and material sophistication. In the majority of schools

# EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW 

the mechanical and electrical systems are micro-computer controlled. Without competent maintenance staff available who thoroughly understand the systems, these systems are both a capital and a maintenance liability.
3. Maintenance of a building extends to thorough and regular cleaning. Greater understanding of indoor air quality issues in buildings indicate that healthy air requires that a balance of several factors be maintained. Microbes requires a source of food, moisture and warmth in order to live and propagate. It is unreasonable to believe that where open windows and ventilation intakes provide a source of fresh air into schools, that naturally occurring microbes will not be introduces with the fresh air. The significant difference between a school with air quality problems and one without is the concentration levels of microbes. To reduce the risk of poor air quality every effort must be made to eliminate the source of food and moisture. Little can be done about the need for warmth.

Food available to microbes is in the form of dirt, dust and organic building materials. Relative to the discussion of floor materials later in this report, carpet provides a more difficult material to clean than does hard surface. A through and regular cleaning of all surfaces where dust and dirt may collect is essential to reduce the potential for microbial growth. This extends to mechanical systems and filters.

Sources of moisture come from leaks into the building through the weather envelope and leaks within the building from poorly maintained mechanical systems such as humidification and plumbing systems. Every effort must be made to inspect the perimeter surfaces of the school buildings on a regular basis for damage to the weather envelope and to have any damage repaired immediately. Proper inspection must also be undertaken for the mechanical systems where water is involved to ensure that leaks are detected and repaired and that standing
water is eliminated. Materials which have been wetted must be inspected, repaired, cleaned and if necessary replaced.
4. Regular maintenance leads to reduced cost of operation of mechanical systems. Well maintained systems are more efficient and break down less frequently. Preventative maintenance is key to obtaining lower operation and maintenance costs.
5. Possibly the most difficult to deal with is the question of maintenance funding, particularly at a time when financial support is eroding. Through research in other studies, we have concluded that an allowance in the order of magnitude of $\$ 2.00$ per $\mathrm{F} \dagger 2$ per year for ongoing maintenance is appropriate for a rule of thumb.

As compared to the replacement value for a comparable school type, this translates to $2.2 \%$ of the estimated replacement value of the building.

It should also be noted that as the newer, more sophisticated buildings begin to age their maintenance and repair costs will out-strip those older less sophisticated buildings, that is those buildings in which mechanical and electrical systems were never installed. Through preventative maintenance this is possible to avoid and every effort must be made to do so.

Building maintenance is not simply a matter of providing more money. In order to be successful a number of strategic initiatives must all come together. These include adequate funding, proper training for maintenance personnel, a planned approach to problem identification (survey), a planned approach to problem rectification and commitment to an ongoing preventative maintenance program.

It is unreasonable to assume that all buildings require the same level of maintenance at any given point in time particularly if some level of

PAGE 17

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

deterioration has been allowed to occur. Stated another way, it is unreasonable to expect a budget allocation for an average building in good condition to be suitable for an average building which has not been maintained regularly for a number of years or at all.

Another consideration is that not all buildings are equal in terms of their construction detailing, use of materials, or the presence through the range of the various mechanical or electrical systems. The range of systems available to buildings today is varied and the cost and attention necessary to maintain the variety of components is as varied as the components themselves.

A program should be developed to put in place a training program for motivated maintenance staff and the financial resources to repair and replace the major building systems.

At present school maintenance is undertaken by both the Eastern School District and the P.E.I. Department of Transportation and Public Works. Generally, the responsibilities of the School District extend to day to day maintenance. The provincial program provides maintenance dollars to all schools on the Island on an annual basis on some priority basis. The work covered includes major maintenance and upgrading including such items as roof repair/replacement, window replacement, exterior envelope repair, ventilation/heating system upgrade, replacement of floor finishes. In addition, capital dollars for major renovations, additions and new construction are provincially funded.

It is important to understand the relationship between day to day maintenance/cleaning on long term capital maintenance. If neglected, the day to day maintenance will significantly increase the capital requirement for repairs and replacement thus placing an unnecessary burden on these scarce dollars. Major repairs will be required earlier, more frequently and ill have broader implications than would be the case with a well maintained building.

The establishment of a maintenance review by an adequate, well trained staff on a frequent basis with an action plan for implementation and follow up is money well spent.

## CURRENT MAINTENANCE PROGRAM

The current program for maintenance being undertaken by the Province as noted above is addressing to each of the schools in turn.

With respect to the upgrades for schools in this District, work completed or in progress is noted in the respective school summaries in Appendix A.

## FLOORING MATERIALS

Over the last number of years, a re-evaluation of the flooring materials appropriate for use in schools and other commercial and institutional buildings has occurred.

Through the period of the 1970's and 1980's a general shift in thinking suggested installing soft surfaces such as carpet and to move away from the hard surfaces such as terrazzo and vinyl composite tile traditionally used on school floors. Recent experience with schools and commercial buildings indicated that for environmental reasons, a shift back to hard surfaces is appropriate. Hard surfaces retain less dust, provide less opportunity for fungal growth and are less expensive to maintain. The down side is that noise cushioning is less effective with hard surface than with carpet.

Over the last few years a growing number of schools have taken steps to have the carpet removed and replaced with hard surface.

As a comment affecting all schools in the District, planning should be undertaken to ensure that all carpet in teaching and related spaces be removed and replaced with hard surface flooring. It is appropriate to leave up to both the District and the individual school, their preference in deciding how softer spaces such as teacher lounges should be dealt with in terms of floor covering.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## BUILDING CODES

The National Building Code (NBC) is a document prepared by the National Research Council of Canada, which historically has been updated every 5 years. The NBC further references associated documents such as the Canadian Electrical Code (CEC), the National Fire Protection Act (NFPA) and the American Society of Heating, Refrigeration and Air Conditioning Engineers (ASHRAE). It is the purpose of the NBC and related documents to establish standards for building construction and systems, the focus of which is occupant safety. It is the underlying intent of the NBC and related documents to provide a level of systems and environment within a building which provide for adequate life safety, environmental conditions (i.e. light levels and air ventilation levels) and mobility (i.e. barrier free access). While all regulations and standards do not necessarily get more stringent, regulations and standards very often change. It is a fact that buildings never "catch up" to the state of the current day codes.

Prince Edward Island as a whole has not adopted the NBC. The City of Charlottetown has adopted the NBC as one of its components of standards for building construction and life safety. Within the City of Charlottetown by-laws also govern the design and construction of buildings.

Although throughout the Eastern School District the NBC has not been adopted in all areas, it is appropriate to use the NBC as a guide toward a reasonable standard of life safety, mobility and environmental conditions.

In jurisdictions where the document has been adopted, there is no mechanism in place which requires a building owner to maintain a building current with the NBC. However when a major upgrade is contemplated it is expected that the renovations to comply with the Code.

When it becomes necessary or desirable, upgrading older buildings where they were not originally designed to incorporate fire ratings or bulky and
space consuming systems can be difficult to achieve the letter of the Regulation. More often it is the intent to reasonably provide a reasonable life safety which is more readily achievable.

## SPRINKLERS

At present, the City of Charlottetown is the only Authority Having Jurisdiction within the Eastern School District which through the National Building Code of Canada and its own Municipal By-Laws requires sprinklers to be provided in school buildings. A number of years ago the Prince Edward Island Department of Transportation \& Public Works as the design authority for construction of Island schools had established a precedent in which schools located outside the City of Charlottetown would not be provided with sprinkler systems. As noted elsewhere in this report, the National Building Code of Canada is used as a guide and reference establishing a level of safety within buildings. Where the National Building Code of Canada is not adopted in the Province as a whole, the design authority is not obliged to comply with this document.

With exceptions, the buildings in the City of Charlottetown are sprinklered and all buildings outside the City of Charlottetown are not sprinklered. It is the premise of this Report that the lack of a sprinkler system is not in itself a deficiency which must be addressed.

## AREA PER STUDENT

The building area per student for high schools is relatively consistent over a narrow band ranging from about 110 students to 150 students per square foot. The exception are both Morell Regional High and Souris Regional High. Souris Regional High is currently at a utilization rate of $86 \%$. As this number moves toward $100 \%$, its square feet per student would draw closer to the average. Morell Regional High at approximately 200 sq. ft. per student was designed to higher area standards than the balance of the buildings in this group. The average of 150 square feet per student is reasonable. Currently it is at its optimum student enrolment.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

The intermediate schools range from approximately 105 sq. ft. per student to 185 sq. ft. per student. Birchwood at 183 sq. ft . per student currently has a utilization rate of $105 \%$. Rollo Bay is grossly underutilized at $39 \%$. The average of 150 square feet per student is reasonable.

The elementary schools range from 67 sq. ft. per student to 257 sq . ft . per student with the average being about 130 sq . ft. per student. Fortune Consolidated, Morell Consolidated, Mt. Stewart Consolidated, St. Peters Consolidated and Tracadie Cross Consolidated are all schools which are seriously under-utilized. On the other end of the spectrum, Cardigan Consolidated, Glen Stewart Elementary, Parkdale Elementary are schools which have a current utilization rate in excess of $100 \%$. A re-distribution of the population would better utilize school facilities.

The utilization rate better reflects where economies can be made than does the square feet of building area per student as this is an indication, in part, of the basic design of the building. Allowing that no additional classroom can be easily recovered, the optimum student population cannot be changed. The utilization rate is a descriptor of the current population relative to its optimum population. The low utilization rate is simply saying that the resources are under-utilized. The fixed cost for $100 \%$ utilization rate is the same for a $50 \%$ utilization rate. Stated another way, the District is paying for resources which it is not using.

## HOURLY COST

For information purposes the average cost to operate a school on a square foot basis is $\$ 0.18$ per square foot per hour, plus the hourly custodial charges. This is derived by dividing the total annual operational and maintenance cost by the total building area. This, in turn, is divided by an assumed 12 hour day. It must be recognized that not all schools operate at the same cost and not all hours of the day or through the year represent the same cost.

## OPERATING COSTS

The Eastern School District is currently responsible for $2,056,585$ square feet of building area. In the fiscal year 1995-96, $\$ 1,338,466$ was spent on electrical costs, $\$ 750,404$ was spent on fuel costs and $\$ 2,617,311$ was spent on all operational and maintenance costs. Across the District, the cost to operate schools is $\$ 0.10 / \mathrm{Ft} 2 /$ year on average.

In assessing the operational and maintenance costs, a number of matters became apparent. Most important are that there are savings available, the savings can be achieved at no cost the Eastern School District in the short term, the changes necessary will result in ongoing and long term savings and the savings have no negative impact on providing a suitable educational environment.

## General

The purpose of showing the identified costs as a function of cost per 10 students is to obtain a relative cost (school to school), on a per student basis. Stated another way, what needs to be identified is which schools are less expensive to operate per student. This approach quickly demonstrates the importance of maintaining school usage at an optimum level.

The purpose of showing the cost per 1,000 square feet is to provide an absolute comparison between schools, independent of student population. In this approach the costs are fixed whether the school is full or half-full. This provides a guide to the efficiency of the school for the cost category (electricity, fuel or building and maintenance).

To some degree costs will be reflective of building use, that is those buildings used heavily for night activities will naturally cost more to operate.

## Electrical Costs

An average electrical cost for high schools is about $\$ 550 / 1,000$ square feet with Montague, Colonel Gray and Bluefield being the most

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

expensive to operate electrically. Montague electrical costs can expect to increase as its new ventilation system come on stream. Morell and Montague High schools did not have ventilation systems installed until recently. Charlottetown Rural and Colonel Gray were upgraded in 1991-92.

A close look at Charlottetown Rural electrical costs reveals that in 1991-92, $\$ 44,269$ was spent and the next three years averaged $\$ 66,742$ Although some of the cost increase is attributable to area increase, the most of the $50 \%$ cost increase is due to the installation and operation of its new ventilation system. As the Province moves to upgrade the ventilation systems in schools, the electrical and fuel costs will rise.

On a square foot cost, each high school should target to achieve a cost of $\$ 400 / 1,000$ square feet.

Intermediate schools operate in a narrower range averaging $\$ 600.00 / 1000$ sq. ft. Birchwood is able to achieve $\$ 483 / 1,000$ square feet. Each of the schools has a ventilation system although the Stone Park is aging. The significance of the ventilation system to electrical consumption is that ventilation systems are high energy consumers. A target of $\$ 500.00 / 1000$ sq. ft . for the intermediate level is realistic.

Each of the intermediate schools except Montague have ventilation systems installed.

The average electrical cost for elementary schools is approximately $\$ 425 / 1,000$ square feet. The range of mechanical systems and building construction and condition is wide at the elementary level. This is producing a predictably wide range of cost/1,000 square feet.

Within the elementary group of schools, there are electrical costs of about $\$ 300$. per thousand square feet for such schools as Dundas, Fortune,

Georgetown, Grand Tracadie, Lucy Maude, Montague, Morell, Souris Consolidated, Spring Park, West Kent. In the above list of schools are a variety of ventilation systems ranging from none to basic. The extremes in electrical costs are West Royalty and Glen Stewart which operate large areas of electrically heated mobile classrooms. Eastern Kings Consolidated is extraordinarily high. It should be the objective to return all elementary schools to a cost of not more than approximately $\$ 400$. per thousand square feet. West Royalty and Glen Stewart electrical costs are predictably high given their reliance on electricity to heat the high proportion of poorly insulated and sealed mobile units and relocatable units respectively.

Schools including Eastern Kings, Eliot River, Glen Stewart, Gulf Shore, Mt. Stewart, Southern Kings, St. Teresa's, Vernon River and Westwood have ventilation systems installed.

## Fuel Costs

As for Electrical costs, the cost per student provides a graphical representation of the relative per student cost between schools.

The average fuel cost for high schools is approximately $\$ 75 / 1,000$ square feet. The average fuel cost for intermediate schools is approximately $\$ 350 / 1,000$ square feet. The average fuel costs for elementary schools is approximately $\$ 390 / 1,000$ square feet.

Colonel Gray and Queen Charlotte are the only two schools on the Charlottetown District Heating system. Although this will not affect the heating costs, it will lower operational costs over time due to the lack of required boiler maintenance costs at each of these schools.

Generally, the building envelopes are more efficient in the senior and intermediate schools.

Notably Central Queens, Fort Augustus, Georgetown, Glen Stewart, Grand Tracadie, Mt.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

Stewart, Souther Kings, Vernon River, and Westwood are well above $\$ 400 / 1,000$ square feet.

Potential reasons for excessive heating costs are poor insulation levels, lack of air barriers and poor seals at windows and doors.

West Royalty has low fuel costs because it is heated primarily by electrically.

## Building And Maintenance

The average building and maintenance costs for high schools is approximately $\$ 225 / 1,000 \mathrm{Ft} 2$ and $\$ 275 / 1,000 \mathrm{Ft} 2$ for intermediate schools.

Charlottetown Rural, Colonel Gray, Birchwood and Queen Charlotte are significantly less costly to maintain. This is expected since each of the four schools is recently renovated.

Considered another way, if not properly maintained in the early years each of these four schools with expensive and extensive systems has the potential to be very expensive to maintain in later years.

The average maintenance cost for elementary schools is approximately $\$ 275 / 1,000 \mathrm{~F} 2$. Although comparable to senior and intermediate schools, these costs should be less due to less sophisticated systems present in these buildings. This average cost is elevated because of a generally older stock of buildings and because of excessive building maintenance costs for Central Queens, Glen Stewart, Grand Tracadie.

## ENERGY SERVICE COMPANIES

Energy Service Companies (ESCo) are companies which undertake detailed investigations into the electrical, mechanical and maintenance operational costs and provide a guaranteed financial return to building owners. Typically, upgrading and repairs will be made to approximately the annual expenditure on these
three items. Various funding arrangements may be negotiated but whichever approach is taken, typical paybacks are five to six years. After that time, financial benefits would accrue directly to the District.

Items targeted by an ESCo are lighting, motors, electric heat, fuel source, ventilation schedules, heating schedules, boiler efficiencies, and maintenance operations, procedures and schedule.

The Eastern School District has had some preliminary discussion with ESCo's but to date no implementation has occurred.

Overall the objective should be to reduce the absolute cost for operating and maintenance. Relative costs between schools should be used to establish costs targets for schools more expensive to operate.

The level of savings expected should be in the order of $20 \%$ for electrical systems and $15 \%$ for fuel savings. This translates to approximately $\$ 214,900$ and $\$ 112,500$ annually respectively after the payback period has expired.

## COST ESTIMATES

For discussion and guidance purposes only and for the purposes of this review, it is appropriate to identify the cost of constructing new school space.

The cost of new construction for school buildings as determined by the Prince Edward Island Department of Transportation and Public Works on 30 May 1996 is provided as follows:

High School Construction $\quad \$ 97.20$ per Ft 2 Intermediate School Construction $\$ 90.75$ per Ft2 Elementary School Construction $\$ 84.25$ per Ft2

This estimate excludes the cost of land, furnishings, equipment and site works. No allowance is made for escalation.

The range of possible renovations and repairs to buildings and the time frame over which these repairs may be undertaken are so varied as to make any attempt at estimating repair or renovation costs to be of limited practical purposes. For this reason repair or renovation costs are presented for general discussion purposes.

Following is a list of major systems together with representative costs in current dollars.

| Ceilings | $\$ 2.60 / \mathrm{ft2}$ |
| :--- | ---: |
| Elevator | $\$ 25,000$ to $\$ 40,000$ |
| Exterior Walls | $\$ 5.00 / \mathrm{ft2}$ |
| Exterior aluminum doors and hardware | $\$ 2,300 / \mathrm{ft2}$ |
| Exterior doors and hardware | $\$ 750 / \mathrm{ft2}$ |
| Gymnasium floor | $\$ 10.00 / \mathrm{ft2}$ |
| Interior doors and hardware | $\$ 600 / \mathrm{ft2}$ |
| Ventilation | $\$ 5.00$ to $\$ 10.00 / \mathrm{ft2}$ |
| Roofing | $\$ 5.50 / \mathrm{ft2}$ |
| Vinyl flooring | $\$ 2.20 / \mathrm{ft2}$ |
| Windows | $\$ 31.00 / \mathrm{ft2}$ |

The development of detailed programming will be required for new construction, additions and renovations in order to establish a more detailed and realistic estimate of construction cost.

# EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW 

## SCHOOL SUMMARIES

(Appendix A)

Background, discussion and recommendations are summarized separately for each school and are presented in Appendix A.

Following the school summary is background information for:

Population History, a history of the number of children living in this catchment area by age and year since 1984.

Enrollment History, a history of the number of children enrolled at the school by grade and year since 1987.

Enrollment Projection, a projection of the total enrollment for this school by grade until the Year 2005.

A map showing the original (existing) catchment area for each respective school.

A map (where appropriate) showing the proposal for the revised catchment area for each respective school.

A matrix sheet showing Pupil Count by Grade of where study area residents attend school (original). This sheet identifies the existing school catchment areas from which students come to attend a particular school. It is broken down into the Regular Program and the District Program (French Immersion).

A matrix sheet showing Pupil Count by Grade of where study area residents attend school
(proposal), (where appropriate) broken down by Regular and District Programs. This information is as above but takes into account the rezoning.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

SCHOOL DATA

(Appendix B)

## EXPLANATION OF SCHOOL DATA

School financial data is presented in Appendix B. For comparative purposes, the data is presented by school type, these being high schools, intermediate schools and elementary schools. Because the requirement and program for each school type vary significantly, it is more appropriate to make a comparative analysis between similar school types rather than between all schools.

Records for each school are presented separately with the exception of Montague Intermediate and Montague Regional High School. Financial records for these two schools have been historically kept together. Attendance and related records have been kept separately and are presented as such in this report.

Enrollment figures used in this report are those reported on 11 September 1996. All other figures are those for the 1995-96 school year. It is not possible to have 1996-97 figures entered in the Geoscope program in time for the publication of this Review.

Records of costs for schools include categories for such items as:

Building Repair and Maintenance, Electricity,
Equipment Maintenance and Repairs, Fire/Safety/fees,
Fuel,
Miscellaneous,
Service Contracts,
Sewer Charges,
Snow Removal,

Supplies,
Waste Disposal,
Water and
Total Maintenance and Operation.
Comparatively, the significant categories are building repair and maintenance, electricity, fuel and total maintenance and operation, those categories bolded above. These are the categories that are presented in the following discussion and in tabular and graphical form for evaluation.

## School Code

This is the school code designation provided by the Eastern School District for record purposes. Following consolidation of the old Units 3 and 4 the old school codes were retained. The 300 series designates schools from the former School Unit Three while the 400 series designates schools from the former School Unit Four.

## School Name

The schools are grouped by high school, intermediate and elementary. Within each grouping the schools are further listed in alphabetical order.

## Grades

This column identifies the grades offered at each of the schools.

## Current Student Enrolment

The current student enrollment identified is that enrollment as at 11 September 1996.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## Optimum Student Enrollment

The optimum student enrollment is the student population as determined by the study team in consultation with the school principal. The optimal enrollment is generally based on the number of classrooms in the respective schools and has made an allowance for regular classrooms and special areas including gymnasium, libraries, french class, computer labs, resource centres arts and music rooms.

The intent of the identification of the optimum student enrollment is to identify a student population which makes the best use of the teaching stations within a school, makes allowance for the regular and traditional special curriculum and at the same time recognizes that the student population does not remain constant. in this report an allowance for expansion of student populations within schools has been made.

## Maximum Student Capacity

The maximum student capacity is determined as that student population which any school should hold without overtaxing its teaching spaces or resources.

## Projected Enrollment

This is the estimated enrollment based on current demographic data taking into account rezoning.

In order to gain an appreciation of the potential of the Geoscope software for planning one need only look to the actual enrollment. The figure for enrollment was generated using the student data base in Geoscope program. The total actual enrollment for the schools in the replanning is 15,793 students. (Recall that this years data has not been entered yet). The Department of Education statistics show total enrollment of on 30 September 1995 as being 15,828 , a difference of 35 students. This represents a
difference of less than 1 student per school across the District.

## Projected Student Capacity

Projected student capacity is determined as that student population which any school should hold without overtaxing its teaching spaces or resources in the rezoned configuration.

## Current Utilization Rate

Utilization rate is the current student enrollment divided by the optimum student enrollment, expressed as a percentage.

## Projected Utilization Rate

Utilization rate is the current student enrollment divided by the optimum student enrollment, expressed as a percentage in the rezoned configuration.

## Fixed Building Area

Fixed building area is the gross area of the respective school buildings exclusive of any mobiles, relocatable classes or nonpermanent additions.

## Portable Classroom Area

Portable classroom area is the gross area of mobiles, relocatable classes and nonpermanent additions.

## Total Building Area

Total building area is the sum of fixed building area plus portable classroom area.

## Projected Total Building Area

Total building area is the sum of fixed building area plus portable classroom area in the rezoned configuration.

Initial Construction Year
Initial construction year is the year the building was constructed or opened.

## EASTERN SCHOOL DISTRICT <br> FACILITY REVIEW

## Major Renovation Year

Major renovation year identifies the year the school underwent a major renovation and / or addition.

## Age Since Major Renovation

Age since major renovation is the number of years since the school has undergone a major renovation and is calculated by subtracting the major renovation year or initial construction year from the initial construction year.

## Current Area Per Student

Current area per student is an expression of the area available per student and is calculated by dividing the total building area by the current student enrollment.

## Annual Building Repair \& Maintenance

 CostsAnnual building repair and maintenance costs as provided by the Eastern School District reflects the maintenance dollars spent on a school by the District on an annual basis but excludes any major expenditures undertaken by the Province.

Annual Average Building Repair \& Maintenance Cost / 1000 Ft 2
Annual building repair and maintenance costs expressed as a function of building area.

Annual Average Building Repair \& Maintenance Cost / 10 Students
Annual building repair and maintenance costs expressed as a cost per 10 students.

## Annual Electrical Costs

Annual electrical costs as provided by the Eastern School District.

Annual Electrical Cost / 1000 Ft2
Annual electrical costs expressed as a function of building area.

Annual Electrical Cost / 10 Students
Annual electrical costs expressed as a cost per 10 students.

## Annual Fuel Costs

Annual fuel costs as provided by the Eastern School District.

## Annual Fuel Cost / 1000 Ft 2

Annual fuel costs expressed as a function of building area.

## Annual Fuel Cost / 10 Students

Annual fuel costs expressed as a cost per 10 students.

## Annual Total Operation and Maintenance Costs

Annual Total Operation and Maintenance Costs as provided by the Eastern School District.

## Annual Total Operation and Maintenance Cost / 1000 Ft2

Annual total operation and maintenance costs expressed as a function of building area.

## Annual Total Operation and Maintenance Cost / 10 Students <br> Annual total operation and maintenance costs expressed as a cost per 10 students.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## GRAPHICAL DATA

(Appendix C)

Graphical data derived from the school data is presented in Appendix C. The data is presented for the respective schools by group. At the bottom of each group the average is presented for that group.

## Square Feet of Building Area per Student

 Total gross area of building area divided by the current student population.
## Utilization Rate

Current student enrollment divided by optimum student enrollment. The projected utilization rate is presented based on the recommendations in this report

## Annual Average Building and Maintenance Costs

The annual building and maintenance costs expressed as a function of both building area and cost per 10 students.

## Annual Average Electrical Costs

The annual building electrical costs expressed as a function of both building area and cost per 10 students.

## Annual Average Fuel Costs

The annual building fuel costs expressed as a function of both building area and cost per 10 students.

## Annual Average Total Operation and Mainfenance Costs

The annual building total operation and maintenance costs expressed as a function of both building area and cost per 10 students.

## Annual Costs

These graphs provide an historic examination of the building repair and maintenance, electrical fuel and total operation and maintenance expenditures over the past four years. The electrical and fuel costs are reasonably consistent. There is a trend apparent in the repair and maintenance which reflects in the total, that fewer dollars are being spent each successive year to maintain the buildings. This is inconsistent with the expected needs of an ever aging building stock. Stated another way, less expenditure on maintenance costs will result in greater capital expenditures.

## Annual Historic Enrollment

The annual historic enrollment of the total Eastern School District from 1980-81 to 1995-96.

## Capacity Versus Enrollment

The graph shows the annual increase in annual optimum and maximum capacity and decline and stabilization of the annual enrollment.

The recommendations bring the optimum capacity and projected enrollment better into alignment with sufficient capacity to accommodate any upturn in future enroliment.

## Annual Historic Enrollment (School by School Basis)

The graphical presentation represents the annual historic enrollment for each school. For comparative purposes the optimum, maximum and projected enrollment are presented as well. Two significant issues are identified by the graphs, the utilization rate of each school as
compared to the optimum capacity of that school and the trend over time toward increased, decreased or stable utilization.

As noted previously the high schools and intermediate schools work within a progressive family of schools. Although Montague Regional High School has a history of relatively stable though reduced enrollment relative to the optimum enrollment rectifying this situation is difficult. The remainder of the high schools and intermediate schools indicate a relatively consistent and acceptable level of enrollment, both in quantity and trend. The elementary schools are more varied.

Births in Prince Edward Island statistical data from the Department of Education indicates the births on Prince Edward Island from 1985 to 1995. These births are reasonably well synchronized with the annual historic enrollment, allowing for the 6 year shift for newborn children to reach school age.

## MAPS

(APPENDIX 'D')

Maps are provided in Appendix $D$ which indicate the location of existing schools, existing zoning for Elementary and High Schools ans Re-zoning for Elementary and High Schools. Intermediate School zoning is generally reflective of High School zoning in order to maintain the family of schools concept.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## POLICIES

(APPENDIX 'E')

For information purposes, policies are provided in Appendix E for Permanent Closure, Re-zoning and Transportation.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## RECOMMENDATIONS

## Recommendations put forth in this Report are:

1. That existing school buildings including Eastern Kings, Dundas, Grand Tracadie, St. Teresa's and West Royalty close, that students who now attend these schools be rezoned to attend adjacent schools, and that the school buildings be returned to the care, custody and control of the Province
2. That the present school board office in Montague close and the office be relocated in the proposed construction at Montague Intermediate School. Temporary relocation to Montague Consolidated School will occur until such time that a new Montague Intermediate School can be constructed.
3. That major re-zoning occur at Glen Stewart, Mt. Stewart, Prince Street, Fortune/Rollo Bay, St. Jean, St. Peter's, Souris Consolidated, Spring Park, Tracadie Cross, Vernon River and West Kent. This re-zoning will address overcrowding which is identified schools in this group and add students to those schools which are presently under utilized.
4. That major rezoning occur at Birchwood, Queen Charlotte, Stone Park, Charlottetown Rural, and Colonel Gray to reflect the re-zoning of the schools from which they receive students. Intermediate and Senior High Schools will be populated by assigning graduates from specific elementary schools
5. That minor re-zoning occur at Belfast, Cardigan, Central Queens, Georgetown, Gulf Shore, L.M.

Montgomery, Montague Consolidated, Morell Consolidated, Parkdale, Sherwood and Southern Kings. This re-zoning will address transportation inefficiencies and relocation of the students who will require accommodation due to their present school being recommended for closure.
6. That Englewood and Eliot River/Westwood retain the boundaries which they serve at present.
7. That planning for the construction of a new Montague Intermediate School be undertaken to alleviate very serious over-crowding, as well as to address reduced opportunity for students in a number of areas, which currently exists at this school.
8. That planning for the construction of a new gymnasium be undertaken for Parkdale Elementary School. With the construction of this gym, all our schools in the Eastern School District will be provided gymnasium. Rented space will not longer be required for this purpose.
9. That planning for a renovation and addition be undertaken for Bluefield High School, to provide the necessary space for computer technology and career exploration within the existing building, to create increased flexibility by modifying the existing science laboratories and to create needed space for meetings and classes with an addition.
10. That, where Fort Augustus Consolidated School is in a state of dis-repair and it is not suitable for
renovation, planning should be undertaken for the construction of a new structure that will be located closer to Charlottetown in order to further alleviate the over crowding at Glen Stewart School and to address future population expansion anticipated in the area.
11. That maintenance responsibility and funding arrangement be clearly identified between Eastern School District and Provincial Government and that a capital program be established and adequately funded that will provide the necessary and ongoing capital maintenance program.
12. That ongoing monitoring system be implemented to cause regular reviews of the facilities with a view to further optimizing the system.
13. That an Energy Service Company be engaged immediately to implement efficiencies available in the mechanical, electrical and building maintenance systems.
14. That planning for future facilities be done so in the context of this Report and that due consideration be given to:

- student demographics,

ㅁ program needs,

- space requirements relative to building type and in keeping with current average (elementary, intermediate or high school),
ㅁ finishes,
- mechanical and electrical system requirements and
- materials of construction and detailing
all with a view to understanding to total capital and operational costs during the planning stages in order that adequate financial resources may be established to properly operate and maintain the facility throughout its life.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## SUMMARY OF CAPITAL PROJECTS

The identified capital projects are summarized below. A ranking of all identified projects will be required in order to establish a capital program with an appropriate schedule for work and funding.

The number identified to the left of the recommendations below, refers to the priority for that school without regard to other facilities.

## High Schools

Bluefield High School
1 Addition/renovation
2 Minor site work
Charlottetown Rural High School
None identified
Colonel Gray Senior High School
None identified
Montague Regional High School
1 Window replacement
Morell Regional High School
None identified
Souris Regional High School
1 Door leak repair
2 Roof replacement

## Intermediate Schools

Birchwood Intermediate High School
2 Boiler replacement
East Wiltshire Intermediate High School
1 Ventilation vibration repair
1 Gym partition repair
Montague Intermediate School
1 Addition
1 Heating Control
Queen Charlotte Intermediate High School
1 Roof repair and brick repointing

Rollo Bay Consolidated School None identified
Stonepark Intermediate School
1 Roof repair, ventilation upgrade, partition upgrade

## Elementary Schools

Belfast Consolidated School
1 Handicapped lift
Cardigan Consolidated School
1 Heat control
2 Roof repair
Central Queens Elementary School
1 Ventilation upgrade, window repair
Dundas Consolidated School Close
Eastern Kings Consolidated School Close
Eliot River Elementary School
1 Window and roof repair
Englewood Elementary School
1 Window and skylight repair, minor regrading, mobile repair
Fort Augustus Elementary School None identified
Fortune Consolidated School
1 Wall repair
Georgetown Elementary School
1 Window repair and washroom ventilation
2 Roof repair
Glen Stewart Elementary School None identified
Grand Tracadie Elementary School Close
Gulf Shore Consolidated School None identified
L. M. Montgomery Elementary School
1 Minor roof leaks and window repair
Montague Consolidated School
1 Window repair
2 Handicapped access
Morell Consolidated School
1 Repair handicapped lift
Mt. Stewart Consolidated School None identified
Parkdale Elementary School
1 Gymnasium addition, heat control, handicapped lift installed
Prince Street Elementary School
1 Roof and window replacement
2 Repainting
Souris Consolidated School None identified
St. Jean Elementary School
1 Facelift
St. Peter's Elementary School
1 Brick repointing and window replacement
St. Teresa's Elementary School
Close
Sherwood Elementary School
2 Repair pavement
Southern Kings Consolidated School
2 Window repair
Spring Park Elementary School
2 Handicapped Ramp
Tracadie Cross Consolidated School
1 Heat Control
Vernon River Consolidated School
1 Ventilation and window repair
West Kent Elementary School
2 Gym roof, gym lighting, window repair
West Royalty Elementary School
Close
Westwood Elementary School None identified
School Board Office
1 Relocate

## SUMMARY OF COST SAVINGS

The identified cost savings are summarized below. Costs identified for school closures have been rounded and therefore vary slightly from those savings noted in the respective school summaries.

## High Schools

Bluefield High School
Bussing $\quad \$ 280,000 / \mathrm{yr}$
Charlottetown Rural High School
Rezoning $\quad \$ 150,000 / \mathrm{yr}$ (estimate)
Colonel Gray Senior High School
Shared savings with city schools
Montague Regional High School
Shared savings with Dundas
Morell Regional High School
Shared savings with Mt. Stewart
Souris Regional High School
Shared savings with Fortune

Intermediate Schools
Birchwood Intermediate High School
2 Boiler replacement
East Wiltshire Intermediate High School
Shared savings with Bluefield
Montague Intermediate School
None identified
Queen Charlotte Intermediate High School
Shared savings with city schools
Rollo Bay Consolidated School
Bussing $\quad \$ 35,000 / \mathrm{yr}$
Stonepark Intermediate School
Shared savings with city schools

## Elementary Schools

Belfast Consolidated School
Minor savings in bussing

Cardigan Consolidated School Identified under Dundas
Central Queens Elementary School
Bussing $\quad \$ 70,000 / \mathrm{yr}$
Dundas Consolidated School
Bussing $\quad \$ 35,000 / \mathrm{yr}$
Closure $\quad \$ 42,200 / \mathrm{yr}$
Eastern Kings Consolidated School
Bussing $\quad \$ 70,000 / \mathrm{yr}$
Closure $\quad \$ 51,400 / \mathrm{yr}$
Eliot River Elementary School
Shared savings with Bluefield
Englewood Elementary School Bussing $\quad \$ 50,000 / \mathrm{yr}$
Fort Augustus Elementary School
None identified
Fortune Consolidated School
None identified
Georgetown Elementary School None identified
Glen Stewart Elementary School None identified
Grand Tracadie Elementary School Bussing $\quad \$ 35,000 / \mathrm{yr}$ Closure $\quad \$ 24,900 / \mathrm{yr}$
Gulf Shore Consolidated School Bussing $\quad \$ 35,000 / \mathrm{yr}$
L. M. Montgomery Elementary School

Shared savings with Tracadie
Montague Consolidated School None identified
Morell Consolidated School Shared savings with Morell Regional
Mt. Stewart Consolidated School
Shared savings with St.Teresa's
Parkdale Elementary School
Shared savings with city schools

Prince Street Elementary School Shared savings with city schools
Souris Consolidated School
Shared savings Eastern Kings
St. Jean Elementary School
Shared savings with city schools
St. Peter's Elementary School
Shared savings with Dundas
St. Teresa's Elementary School
Bussing $\quad \$ 70,000 / \mathrm{yr}$
Closure $\quad \$ 29,800 / \mathrm{yr}$
Sherwood Elementary School Shared savings with city schools
Southern Kings Consolidated School
No significant change
Spring Park Elementary School Shared savings with city schools
Tracadie Cross Consolidated School Bussing $\quad \$ 35,000 / \mathrm{yr}$
Vernon River Consolidated School
No significant change
West Kent Elementary School
Shared savings with city schools
West Royalty Elementary School
Bussing $\quad \$ 35,000 / \mathrm{yr}$
Closure $\quad \$ 42,100 / \mathrm{yr}$
Westwood Elementary School
Shared savings with Bluefield
School Board Office
Closure $\quad \$ 15,000 / \mathrm{yr}$ (estimate)
The total annual estimate of cost savings for the items identified above is $\$ 1,105,400 / \mathrm{yr}$.

In addition there is potential savings of $\$ 214,900$ plus $\$ 112,500$ for electrical and mechanical systems, following upgrade by an ESCo and payback. These values are expressed in current dollars.

The total savings potential, in time is $\$ 1,432,800$.

BLUEFIELD
HIGH
SCHOOL

## Overview

Bluefield High School was originally constructed in 1953 and underwent a major renovation and addition in 1991. The building is in good physical condition. The roof was replace with a new IRMA System in the past 3 to 5 years. The Ventilation and humidity system was upgraded 2 years ago. The exterior panels are planned for repair next spring. New flooring has been installed. No other problems were reported or observed with the major building systems. No main central lobby is provided, however, this is a function of the overall school design.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 750 students.

## Capacity Enrolment

Capacity enrolment is determined to be 900 students.

## Building Code Standards

The building has generally accommodated the intent of the National Building Code.

## Handicap Access

The construction made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the high school program.

## Space Utilization

At present, Bluefield High School is being utilized at $111 \%$ of its optimum student population.

Building and Maintenance Costs
Bluefield High School is being maintained at above average building and maintenance costs.

## Electrical Costs

Bluefield High School is running at slightly above average for the high school group.

## Fuel Costs

Fuel costs are about average for the high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly above average for the senior high school group.

## Projected Capital Project Requirements

Minor repairs are required for the roof, racquet courts and tennis court fence (Priority Two). Additions and renovations are recommended as outlined below, (Priority One).

## Information Re Section (6) Zoning Policy

There is no recommendation for change in the boundaries served by Bluefield High School. The school will continue to receive senior high school students from Central Queens, Eliot River/Westwood, Englewood and Gulf Shore Consolidated areas. In the Eastern School District the other five senior High Schools have received a major renovation and upgrading over the past
ten to fifteen years. Bluefield has not experienced any renovation since it was built. Bluefield has a very high occupancy rate and will continue to have a high rate for the next ten years. We recommend that this school receive improvements in the area of facilities for computer technology and the area of Career Exploration Courses. The science laboratories should receive some renovations so that these areas can be further utilized as teaching stations while not in use as science laboratories. All of the above renovations should take place within the existing school. The school is very pressed for classroom and meeting space at present. This situation will continue for the immediate future. We recommend that six to eight areas be added to this building to provide the space required for instruction and meetings.

Bluefield High School shares buses with East Wiltshire Intermediate School and Eliot River/Westwood Consolidated Schools. These schools are served by 31 school buses. The area from Hampshire to Warren Grove, to York Point to Clyde River, and back to Hampshire has 1170 of these students. We recommend that 324 of these students area within walking distance of the schools they attend. We also recommend that the remaining 846 be served with double bus runs. This should be possible with a minimum of supervision at the schools. The principals and Transportation Supervisor would meet and discuss starting and dismissal times to accommodate this recommendation. If this were to be accomplished, a fleet of 23 buses will be adequate. Seventeen of these buses will have to make double runs. Once these double runs are completed, twenty-three buses will be adequate to accommodate the remaining 1134 students. This will result in a fleet decrease of eight buses. Each bus will result in a yearly saving of $\$ 35,000$. This will mean a total yearly saving of $\$ 280,000$. Over ten years this saving will amount to $\$ 2.8$ million.

## CHARLOTTETOWN <br> RURAL HIGH SCHOOL

## Overview

Charlottetown Rural High School was originally constructed in 1965 and underwent a major renovation and addition in 1992 which approximately doubled the floor area. The building is in excellent physical condition. No problems were reported or observed with the major building systems.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 1050 students.

## Capacity Enrolment

Capacity enrolment is determined to be 1100 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building is well designed to accommodate the senior high program.

## Space Utilization

At present Charlottetown Rural High School is being utilized at $100 \%$ of its optimum student population.

## Building and Maintenance Costs

Charlottetown Rural High School is being maintained at well below average building and maintenance costs. This is understandable for an essentially new building.

## Electrical Costs

Charlottetown Rural High School is running at slightly below average electrical costs.

## Fuel Costs

Fuel costs are at slightly below average for the senior high school group.

## Total Operating and Maintenance Costs

Total operating and maintenance costs are at about $80 \%$ of average for the senior high school group.

## Projected Capital Project Requirements

Given the recent renovations to the building no capital projects are anticipated beyond normal maintenance.

Charlottetown Rural High School will receive all of the students who reside in the areas zoned to Sherwood, Fort Augustus, L. M. Montgomery, and Parkdale Elementary Schools for both English and French Programs. Charlottetown Rural will also receive students who live in the area served by Spring Park Elementary School north of Belvedere Avenue (Referred to as Spring Park north) for both English and French Programs.

## Information Re Section (6) Zoning Policy

The composite of all the areas listed above will form the new proposed boundaries of Charlottetown Rural Senior High School.

In 1990-91 Chariottetown Rural High School had a population of 1050 students. The current school year Charlottetown Rural has a population of 1090 students. Over this period the population of Chariottetown Rural has fluctuated from a high of the current year 1090 to a low of 1015 students. The zone now referred to as Charlottetown Rural is new in part. However, over the past five years the student fluctuation in this new zone is not significantly different from in the old area.

Over the next five years there is no major projected increase or decrease in the student population.

The optimum enrollment at Chariottetown Rural is 1050 students. The new zone gives this school an enrollment of 992 students. This will allow for a modest fluctuation in the student enrollment for the foreseeable future.

At the present time there are some statistics that indicate new residential subdivision within this area. However, enrollment projections for the foreseeable future indicate that this school will have space available.

At the present time there are no known plans for any significant industrial development in this area.

The new zoning arrangements provides for all students within walking distance of this school the opportunity to walk to school. The zoning arrangements will streamline the bussing system within this family of schools.

This re-zoning will have no major educational impact on this school.

The financial impact will come from the overall reorganization of the city school system. It is very difficult to arive at exact savings from measures taken at this school alone. The overall impact of all the re-zoning will amount to substantial savings.

## COLONEL <br> GRAY <br> HIGH <br> SCHOOL

## Overview

Colonel Gray High School was originally constructed in 1968 and underwent a major renovation and addition in 1992. This addition approximately doubled the floor area. The building is in very good physical condition. No problems were reported or observed with the major building systems.

Optimum Student Enrollment
The optimum student enrolment is determined to be 1025 students.

Capacity Enrolment
Capacity enrolment is determined to be 1100 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accomodate the senior high school program.

## Space Utilization

At present Colonel Gray High School is being utilized at $97 \%$ of its optimum student population.

## Building and Maintenance Costs

Colonel Gray High School is being maintained at well below average building and maintenance costs. This is understnadable for an essentially new building.

## Electrical Costs

Colonel Gray High School is running at below average electrical costs.

## Fuel Costs

Fuel costs are slightly below average for the senior high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at average for the senior high school group.

Projected Capital Project Requirements
No capital projects are anticipated for this building.

Information Re Section (6) Zoning Policy
Colonel Gray Senior High School will receive all of the students who reside in the areas zoned to Glen Stewart, West Kent, St. Jean, and Prince Street Elementary Schools for both English and French Programs. Colonel Gray Senior High School will also receive those students who live in the area served by Spring Park Elementary School south of Belvedere Avenue (Referred to as Spring Park south) for both English and French Programs.

The composite of all the areas listed above will form the new proposed boundaries of Colonel Gray Senior High School.

In 1990-91 Colonel Gray Senior High School had a population of 822 students. The current school year Colonel Gray has a population of 996 students. Over this period of time the population at Colonel Gray has fluctuated between a low of 882 and a high of 1019 students. The area now referred to as the Colonel Gray zone is new in part. However, over the past five years the student fluctuation in the new zone is not significantly different from in the old area.

Over the next five years there is no major projected increase or decrease in student population.

The optimum enrollment for Colonel Gray Senior High School is 1025 students. The new zone gives this school a population of 977 students. This will allow for modest fluctuation in the student enrollment during the foreseeable future.

At the present time there are statistics available which indicate new residential subdivision within this area. However, enrollment projections for the foreseeable future do not indicate a major impact on this school.

At the present time there are no known plans for any significant industrial development in this area.

This new zoning arrangement provides for all students within walking distance of this school the opportunity to walk to school. The new zoning will allow for a more streamlined bussing system to this school.

This re-zoning will have no major educational impact on this school.

The financial impact will come from the overall reorganization of the city school system. It is very difficult to arrive at exact savings from measures taken at this school alone. The overall impact on the city system will realize substantial bussing savings.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## MONTAGUE REGIONAL HIGH SCHOOL

## Space Utilization

At present Montague Regional High School is being utilized at $94 \%$ of its optimum student population.

## Building and Maintenance Costs

Montague Regional High School is being maintained at above average building and maintenance costs.

## Electrical Costs

Montague Regional High School is running at about average for the high school group.

## Fuel Costs

Fuel costs are significantly above average for the high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly above average for the high school group.

## Projecłed Capital Project Requirements

It is recommended the remaining existing windows be replaced. Priority One.

Information Re Section (6) Zoning Policy
Montague Senior High will serve the students in senior high school in the area which are zoned to Cardigan Consolidated, Georgetown Consolidated, Montague Consolidated, Southern Kings Consolidated, and Vernon River Consolidated School. All information on the rezoning in the region is contained in the sections which cover each of these schools in this report.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## MORELL REGIONAL HIGH SCHOOL

## Overview

Morell Regional High School was originally constructed in 1962 and underwent a major renovation and addition in 1986. The building is in very good physical condition. The ventilation and humidity system has been upgraded at the end of this year. New flooring has been installed. No problems were reported or observed with the major building systems.

Optimum Student Enrollment
The optimum student enrolment is determined to be 450 students.

## Capacity Enrolment

Capacity enrolment is determined to be 500 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code.

## Handicap Access

A handicapped ramp and lift is available into the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present Morell Regional High School is being utilized at $100 \%$ of its optimum student population.

## Building and Maintenance Costs

Morell Regional High School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Morell Regional High School is running at slightly below average for the high school group.

## Fuel Costs

Fuel costs are slightly below average for the high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the high school group.

Projected Capital Project Requirements There are no recommendations at this time.

Information Re Section (6) Zoning Policy
Morell Regional High School will serve the senior high school students in areas zoned to St. Peter's Consolidated, Morell Consolidated, Mt. Stewart Consolidated and Tracadie Cross Consolidated schools. All information regarding this re-zoning is contained in the information sections which cover the Consolidated areas mentioned above. Morell Regional High will also serve the grade nine students from the same areas noted above.

SOURIS
REGIONAL
HIGH
SCHOOL

## Building and Maintenance Costs

Souris Regional High School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Souris Regional High School is running at about average for the high school group.

## Fuel Costs

Fuel costs are about average for the high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the high school group.

## Projected Capital Project Requirements

It is recommended planning be undertaken to replace the original roof,(Priority Two), repair the leaks and heat control, (Priority One).

## Information Re Section (6) Zoning Policy

Souris Regional High School will serve the senior high school students in the areas zoned to Souris Consolidated School and Fortune/Rollo Bay Consolidated school. All information regarding this re-zoning is contained in the information sections which cover the two consolidated areas.

## BIRCHWOOD INTERMEDIATE SCHOOL

## Overview

Birchwood Intermediate School was originally constructed in 1957 and underwent a major renovation and addition in 1989. The building is in very good physical condition. No problems were reported or observed with the major building systems.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 550 students.

## Capacity Enrolment

Capacity enrolment is determined to be 600 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the intermediate program.

## Space Utilization

At present, Birchwood Intermediate School is being utilized at $105 \%$ of its optimum student population.

## Building and Maintenance Costs

Birchwood Intermediate School is being maintained at slightly below average building and maintenance costs. This is understandable for an essentially new building.

## Electrical Costs

Birchwood Intermediate School is running at slightly below average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the intermediate school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the intermediate school group.

## Projected Capital Project Requirements

The boilers are original to the building and can be expected to be replaced in the next 5 years, (Priority Two).

Information Re Section (6) Zoning Policy
Birchwood will receive students who finish elementary school in the Glen Stewart area for English, continuing immersion, and late immersion programs. Birchwood will also receive students who are zoned to Prince Street School in English, continuing immersion, and late immersion programs. The boundaries which are described for each of these elementary schools will form the boundaries which were now comprise Birchwood School.

All students who live in the newly described zones will attend Birchwood school. In some cases these students are attending other schools at the present time.

Over the past five years the attendance zones for the students attending Birchwood were not consistent. In 1990-91 the attendance at Birchwood was 570. This present year the attendance is 553.

There is no indication that there will be an increase or decrease in the student population in the area assigned to Birchwood over the next five years. If for some reasons there are population shifts of major significance it will be relatively easy to adjust boundaries to accommodate the shift.

The optimum enrollment at Birchwood is 550 students. This new alignment places 532 students in Birchwood. This means that the school will be able to quite clearly adjust to a minor increase in enrollment.

At present there are no known statistics regarding approval residential subdivision in the area assigned to this school.

At present there are no plans for any significant industrial development in this area.

The new alignment will allow students in the immediate area to walk to Birchwood. It will also allow for a more streamlined bussing system than exists at present.

The proposed changes for this school should have no major educational impact on the program at this school.

The streamlining of the bussing system will lead to transportation savings. It is very difficult to project exact amounts to be realized in this regard as this is part of a major re-zoning in the whole Charlottetown area.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## EAST WILTSHIRE INTERMEDIATE SCHOOL

Space Utilization
At present East Wiltshire Intermediate School is being utilized at $108 \%$ of its optimum student population.

## Building and Maintenance Costs

East Wiltshire Intermediate School is being maintained at above average building and maintenance costs. This is surprising for a building in relatively good condition.

## Electrical Costs

East Wiltshire Intermediate School is running at about average electrical costs.

## Fuel Costs

Fuel costs are about average for the intermediate school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at slightly below average for the intermediate school group.

## Projected Capital Project Requirements

The major capital expenditures for East Wiltshire Intermediate School are to repair both the ventilation vibration problem and to fix the gymnasium partition, (Priority One).

There is no recommendation for change in the boundaries served by these three schools. In total these schools accommodate 1452 students. The populations are as follows:

East Wiltshire 622
Eliot River 407
Westwood 423 1452

These schools along with Bluefield High School, are served by 31 school buses. When the student body at Bluefield is included in the student population for the area, we have 2349 students. The area from Hampshire to Warren Grove, to York Point to Clyde River, and back to Hampshire has 1170 of these students. We recommend that 324 of these students are within walking distance of the schools they attend. We also recommend that the remaining 846 be served with double bus runs. This should be possible with a minimum of supervision at the schools. The principals and Transportation Supervisor meet and discuss starting and dismissal times to accommodate this recommendation. If this were to be accomplished, a fleet of 23 buses will be adequate. Seventeen of these buses will have to make double runs. Once these double runs will be completed, twenty-three buses will be adequate to accommodate the remaining 1134 students. This will result in a fleet decrease of eight buses. Each bus will result in an yearly saving of $\$ 35,000$. This will mean a total yearly saving of $\$ 280,000$.

## MONTAGUE

INTERMEDIATE SCHOOL

## Space Utilization

At present Montague Regional Intermediate School is being utilized at near its optimum student population.

## Costs

Montague Regional Intermediate School costs are incorporated with Montague Regional High School.

## Projected Capital Project Requirements

It is recommended that heating control be implemented and an addition as outlined below be constructed. Priority One.

## Information Re Section (6) Zoning Policy

Montague Intermediate School will serve the grade seven, eight and nine students from the area that is zoned to Montague Consolidated School. The school will also serve grade nine students from the areas which are zoned to Cardigan Consolidated, Georgetown Consolidated and Southern Kings Consolidated. This will represent no change from the present except where small areas may now be zoned into or away from the consolidated schools which feed Montague Intermediate School.

In addition to the slight reorganisation of the area which will be served by the Montague Intermediate School, we recommend the following:

1. Montague Intermediate/Senior High School should be divided into two distinct schools: Montague Senior High School, grades 10-12
and Montague Intermediate School, grades 7-9.
2. A new library/resource area should be constructed to serve both schools. This centre should be located on the lower floor of the wing in the Senior High School which is closest to the present intermediate School. This area should be accessible to the students from the Intermediate School without them having to enter any other section of the senior high school. The present resource centre in the senior high will be returned to classroom use. The junior high does not have any kind of resource centre at present.
3. An addition should be put on the end of the present Intermediate School which will contain an industrial area and an area that could be used for various activities such as music, drama, assemblies, large group instruction. This area should also contain extensive washroom facilities and administrative and staff areas. At present this building has only classroom areas, very narrow corridors, and totally inadequate washroom facilities.
4. Areas such as gymnasiums and cafeteria should be shared with the senior high school as these areas already exist and can be scheduled to accommodate this side of the intermediate program.
5. The dwindling resources that are available each year for these types of expenditure form the basis for the above recommendations. It will be much more convenient to have two schools which are self-contained units. However, it appears that present dollars do not permit this type of arrangement. The recommendations made above are of a very necessary nature and should be addressed without delay.

## QUEEN

## CHARLOTTE INTERMEDIATE SCHOOL

## Overview

Queen Charlotte Intermediate School was originally constructed in 1953 and underwent a major renovation and addition in 1991. The ventilation system was upgraded this fall. A silicone application to the original brick is required regularly to maintain its waterproofing. Overall the building is in very good physical condition.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 500 students.

## Capacity Enrolment

Capacity enrolment is determined to be 600 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accomodate the intermediate program.

## Space Utilization

At present Queen Charlotte Intermediate School is being utilized at $98 \%$ of its optimum student population.

## Building and Maintenance Costs

Queen Charlotte Intermediate School is being maintained at about $70 \%$ of the average building and maintenance costs. This is understnadable for an essentially new building.

## Electrical Costs

Queen Charlotte Intermediate School is running at slightly above average but are not significant so as to be a concern.

## Fuel Costs

Fuel costs are about average for the intermediate school group.

## Total Operating and Maintenance Costs

Total operating and maintenance costs are slightly above average.

## Projected Capital Project Requirements

During the 1991 renovation a number of items were left as existing due to budget constraints. The roof requires replacement and the exterior masonry requires repointing (Priority Two).

Information Re Section (6) Zoning Policy
Queen Chariotte Intermediate School will receive students who finish elementary school in the areas assigned to West Kent School for English, continuing immersion and late immersion
programs. Queen Charlotte will also receive students who are zoned to St. Jean School in English, continuing immersion, and late immersion. Queen Charlotte will also receive students who attend Spring Park School and live South of Belvedere Avenue (Referred to as Spring Park South) for English, continuing immersion, and late immersion. In addition to the above students who are in the Spring Park attendance zone north of Belvedere Avenue (Referred to as Spring Park North) and who wish to continue in French or enter late immersion will attend Queen Charlotte.

All students who live in the newly described zones will attend Queen Charlotte school. In some cases these students are attending other schools at the present time.

Over the past five years the attendance zones for the students attending Queen Charlotte differed from time to time. In 1990-91 there were 501 students in Queen Charlotte. This present year the attendance at Queen Charlotte is 570 students.

There is no indication that there will be an increase or decrease in the student population in the area assigned to Queen Charlotte over the next five years. If for some reasons there are major enrollment shifts, it will be relatively easy to adjust boundaries to accommodate the shift.

The optimum enrollment at Queen Charlotte is 500 students. The new suggested alignment places 490 students in Queen Charlotte. Looking at the present population in the school it will be relatively easy for this school to adjust to minor increase in student enrollment.

At present there are no known statistics regarding approved residential subdivisions in the areas assigned to this school.

At present there are no plans for any significant industrial development in this area.

The new alignment for this school will allow students in the immediate area to walk to Queen Chariotte. It will also allow for a more streamlined bussing system than exists at present.

The proposed changes for this school should have no major educational impact on the program offered at this school.

The streamlining of bussing will lead to transportation savings. It is very difficult to project exact amounts to be realized in this regard as this is part of a major re-zoning in the whole Charlottetown area.

## ROLLO <br> BAY <br> CONSOLIDATED SCHOOL

## Overview

Rollo Bay Consolidated School was constructed in 1966. The building generally is in good physical condition. The roof was replaced 10 years ago. No central ventilation system is present. The windows were replaced a few years ago. The building was originally designed to accommodate another storey. Ventilation in the washrooms needs to be cleaned regularly.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 170 students.

## Capacity Enrolment

Capacity enrolment is determined to be 200 students.

## Building Code Standards

The building generally has accommodated the intent of the National Building Code.

## Handicap Access

No handicapped access is provided to the building or to the various levels.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present Rollo Bay Consolidated School is being utilized at $39 \%$ of its optimum student population.

## Building and Maintenance Costs

Rollo Bay Consolidated School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Rollo Bay Consolidated School is running at slightly below average for the junior high school group.

## Fuel Costs

Fuel costs are about average for the junior high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the junior high school group.

## Projected Capital Project Requirements

There are no recommendations at this time.

## Information Re Section (6) Zoning Policy

Dundas Consolidated School is recommended for permanent closure. Because of its location, the students from Dundas will be divided among Fortune/Rollo Bay, St. Peter's, and Cardigan. The boundary between Fortune/Rollo Bay and St. Peter's Consolidated on the south side of the St. Peter's Highway would be described as: all that area starting from the Dingwell's Mills intersection and following a line which will pass the intersection of the Birch Hill Road and the Albion Road Route \#327, southward through the intersection of the Gay Road and the Cumberland Road Route \#310 and then south to the eastern end of the bridge crossing the

Boughton River in Bridgetown thence along the Boughton River until it meets the present boundary between Dundas Consolidated and Fortune/Rollo Bay Consolidated. All students in this area will now be served by Fortune/Rollo Bay Consolidated and Souris Regional High School. On the north side of the St. Peter's Highway the dividing line will be a line drawn east of Naufrage Harbour across country in a southerly direction passing through the intersection of the Selkirk Road Route \#309 until it meets the St. Peter's Highway. Residents on both sides of the Selkirk Road Route 309 will be served by St. Peter's Consolidated School and Morell Regional High School.

Fortune/Rollo Bay will be receiving the 50 students who were originally assigned to Dundas Consolidated. High School students in this area will now be attending Souris Regional High School. Students on the North Side Road Route \#16 to Naufrage Harbour and the Selkirk Road Route \#309 will now be assigned to St. Peter's Consolidated School and Morell Regional High School.

In 1990-91 the attendance at Fortune/Rollo Bay was 266 students this population has gradually increased to 278 in 1996-97.

There is no indication of significant increase or decrease in this area over the next five years.

Fortune/Rollo Bay can very easily accommodate 370 students. The net gain in students from the two zoning changes above will give Fortune/Rollo Bay about 50 additional students. This number can be very easily accommodated.

There are no known statistics regarding approved residential subdivision in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are changing zones will be accommodated by the present bussing system in Fortune/Rollo Bay with a reduction of one bus, and those reassigned to St. Peter's will be
adequately accommodated with the present bussing system in St. Peter's.

The impact of this reassignment of students will be increased opportunity for the students both at Fortune/Rollo Bay and those joining from Dundas. The increased number of students in Fortune/Rollo Bay will allow the school administration more options to group students for educational advantage.

The financial impact of this re-zoning will be the deletion of one bus from the run. This will result in a financial saving of $\$ 35,000$ yearly.

## Pupil Counts by Grade

## Grand Total for all Schools

# STONEPARK INTERMEDIATE SCHOOL 

## Overview

Stonepark Intermediate School was constructed in 1973. The existing spraybar humidification system is not performing. The open concept classes have now been partitioned off with poor quality non-fire separation walls resulting in loss of air circulation. The roof is in poor condition as are the exterior doors. Acoustics in the cafeteria are poor. Emergency batteries are corroded. The Lecture Theatre is too noisy to be useful.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 850 students.

## Capacity Enrolment

Capacity enrolment is determined to be 1000 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The building is handicapped accessible.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the high program.

## Space Utilization

At present Stonepark Intermediate School is being utilized at $93 \%$ of its optimum student population.

## Building and Maintenance Costs

Stonepark Intermediate School is being maintained at about $120 \%$ of average building and maintenance costs.

## Electrical Costs

Stonepark Intermediate School is running at slightly above average for the intermediate school group.

## Fuel Costs

Fuel costs are slightly above average for the intermediate school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the intermediate school group.

## Projected Capital Project Requirements

It is recommended that planning be undertaken to repair the balance of the roof, ventilation system, exterior doorsand hardware, remove the carpet, repaint and upgrade the partition to fire separations and emergency batteries, (Priority One).

## Information Re Section (6) Zoning Policy

Stonepark will receive students who finish elementary school in L. M. Montgomery, Parkdale and Sherwood areas for English, continuing immersion and late French immersion programs. Stonepark will also receive those students who finish elementary school at Spring Park in the English Program and live North of Belvedere Avenue (Referred to as Spring Park North). French
immersion students in grade 7, 8, and 9 from the Fort Augustus area will attend Stonepark. The boundaries which are described in the care of each elementary school will form the boundaries which now comprise Stonepark School.

All students who live in the newly described zones will attend Stonepark School. In some cases these students are attending other schools at present.

Over the past five years the attendance zones for the students attending Stonepark were not consistent. In 1990-91 the attendance at Stonepark was 806 students. This present year the attendance at Stonepark is 724 students.

There is no indication that there will be a major increase or decrease in the students population assigned to this school during the next five years. If for some reason there are major shifts, it will be relatively easy to adjust the boundaries to accommodate the shift.

The optimum enrollment at Stonepark is 800 students. The new alignment places 680 students in this school. This means that this school will be able to adjust to a sizeable enrollment increase should the need arise.

At present there are no known statistics regarding approved residential subdivision in the area assigned to this school.

At present there are no plans for significant industrial development in this area.

The new alignment will continue to allow students in the immediate area to walk to Stonepark. With the relocation of the late French immersion program for the students in the Stonepark area the bussing system will experience considerable improvement.

The proposed changes for this school should have no major educational impact on the program at this school.

The streamlining of the bussing system will lead to transportation savings. It is very difficult to project
exact amounts to be realized in this regard as this is part of a major re-zoning in the whole Charlottetown area.

## BELFAST ELEMENTARY SCHOOL

## Building And Maintenance Costs

Belfast Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Belfast Elementary School is running at below average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly below average for the senior high school group.

## Projected Capital Project Requirements

It is recommended that a handicapped lift be installed, (Priority One).

## Information Re Section (6) Zoning Policy

The boundary change which applies to Belfast Consolidated School is described in the Southern Kings Consolidated School boundary changes.

The boundary change will increase the school population in Belfast by approximately 13 students.

In 1990-91 the population in Belfast Consolidated School was 221. During the present school year 1996-97 the student population is 287.

There is no indication that there will be any increase or decrease in the population in this area over the next five years.

Belfast Consolidated can accommodate 325 students with ease. The net gain from the small boundary change will still leave this school well below optimum student numbers.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who will now be coming to Belfast Consolidated School from the assigned area will be accommodated by the bussing system which is already in place for this school.

There will be no impact on the educational program offered to the students at this school.

This small re-organization will not have major financial impact. Some savings may be realized by more efficient bussing.

## CARDIGAN. CONSOLIDATED SCHOOL

## Building and Maintenance Costs

Cardigan Consolidated School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Cardigan Consolidated School is running at about average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

Projected Capital Project Requirements
It is recommended the heating control be repaired, (Priority One). Financial planning should be undertaken to replace the roof and windows within the next 5 years, (Priority Two).

## Information Re Section (6) Zoning Policy

Dundas Consolidated is recommended for permanent closure. Because of its location, the students will be divided among Fortune/Rollo Bay, St. Peter's, and Cardigan. The boundary of Cardigan Consolidated can be described as follows: on the east and north by the boundaries already described for St. Peter's Consolidated, Morell Consolidated and Mt. Stewart Consolidated, thence from the intersection of the 48 Road Route \#5 and the Baldwin Road Route \#22, then in a southerly direction along both sides of the Baldwin Road to the intersection of the

Baldwin Road Route \#22 and the Georgetown Highway Route \#3, thence along both sides of the Georgetown Highway Route \#3 to the intersection of the Georgetown Highway Route \#3 and the Power Road, then along both sides of the Plummers Road to the intersection of the Power Road and Route \#4, thence along the course of the Brudenell River in an easterly direction to the present entrance to the Brudenell River Park, thence in a northerly direction along the highway which intersects with the Georgetown Highway Route \#3 to the intersection of this highway and the Emmerson Highway Route \#342 and extended in the same line to the bank of the Cardigan River and thence along the shoreline to the beginning of the Fortune/Rollo Bay Consolidated School area.

Cardigan Consolidated will relinquish students to Georgetown Consolidated. This number will be replaced by the additional students who will move to Cardigan from the former St. Teresa's and Dundas Consolidated schools.

In 1990-91 the population in Cardigan Consolidated was 182. In the present school year 1996-97 the population in Cardigan Consolidated is 218 students.

During the next five years there is no indication that the school population will either increase or decrease.

The end result of the changes to Cardigan Consolidated will not result in significant attendance difference at the school.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are now coming to Cardigan Consolidated can easily be accommodated by the present fleet of busses serving the Cardigan school.

There will be no significant impact on the educational plan for Cardigan Consolidated.

The financial impact of this move has been reviewed under the closures at St. Teresa's and Dundas.

## CENTRAL QUEENS ELEMENTARY SCHOOL

## Building and Maintenance Costs

Central Queens Elementary School is being maintained at about $160 \%$ of average building and maintenance costs.

## Electrical Costs

Central Queens Elementary School is running at about average for the elementary school group.

## Fuel Costs

Fuel costs are slightly above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly above average for the elementary school group.

## Projected Capital Project Requirements

It is recommended a ventilation system be installed to provide a suitable environment to internal spaces, (Priority One). It is also recommended the windows be replaced in the old section of the building, (Priority One).

## Information Re Section (6) Zoning Policy

Central Queens Consolidated will maintain its present boundaries with the exception of the division of the dual zone which has existed between Central Queens and Gulf Shore. The boundary in the dual zone is recommended in the report on Gulf Shore Consolidated. The division line described in the Gulf Shore report will form the northern boundary of Central Queens.

The division recommended above will not mean any significant change for students in the area. Over the years the division has gradually come into being. At present there are a few students who attend outside the zone. This will be completely eliminated in the future.

Sections (c) - (i) in the zoning policy (see appendix B ) will not impact on this reassignment of the area zoned to these schools.

By implementing double bus runs for students who live close to the school we will be able to eliminate two buses from the fleet. The yearly cost of the bus operation is $\$ 35,000$ per bus. This will amount to savings of $\$ 70,000$ per year.

## DUNDAS CONSOLIDATED ELEMENTARY SCHOOL

## Overview

Dundas Consolidated Elementary School was originally constructed in 1966. The building is in good physical condition. A new roof was installed 8 years ago. The gym roof was repaired $2-3$ years ago. The balance is original. The existing windows require replacement. The west side of the building is experiencing heating control problems.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 200 students.

## Capacity Enrolment

Capacity enroiment is determined to be 225 students.

## Building Code Standards

The building has generally accommodated the intent of the National Building Code.

## Handicap Access

The second floor is not handicapped.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

Space Utilization
At present Dundas Consolidated Elementary School is being utilized at $60 \%$ of its optimum student population.

## Building and Maintenance Costs

Dundas Consolidated Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Dundas Consolidated Elementary School is running at slightly below average for the elementary school group.

## Fuel Costs

Fuel costs are below average for the elementary school group.

Total Operation and Maintenance Costs
Total operating and maintenance costs are at slightly below average for the elementary school group.

Projected Capital Project Requirements
Given the building disposition, no recommendation is made at this time.

## Building Disposition

It is recommended that Dundas Consolidated be closed and that students be moved to Cardigan Consolidated, Fortune Consolidated and St. Peters Consolidated.

Information Re Section (2) Policy
Dundas has insufficient numbers of students to provide a single class per grade. Specialist services can be provided only on a part-time basis. The amount of teaching time required from administration makes it impossible to provide much in the way of teacher supervision or

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

program planning. In the present setting, students are close to home which provides a convenience for both students and parents. The Home and School Association has an opportunity to react quickly to the needs of the students. All of this leads to good relationships within the community.

Dundas school was built in 1966 and has had no major renovation since. The building is in very good condition and is quite adequate to provide for the students.

Most schools adjacent to Dundas have also experienced decline in enrollment and, as a result, space is available. Fortune/Rollo Bay is operating at least 90 students below optimum capacity. St. Peter's Consolidated is operating at least 130 students below optimum capacity. Cardigan Consolidated is presently operating at capacity, but zoning arrangements will free a number of spaces in Cardigan which will accommodate the numbers which will be rezoned to Cardigan.

The major positive impact on the students from Dundas moving to other schools will be that there will be sufficient numbers to provide one grade per classroom and hence increase teacher time for each grade in the classroom. Specialist services presently at Dundas will be re-assigned along with the students, hence increasing specialist time at the receiving schools. In some cases the students will be moving to schools which will have the flexibility of two classes per grade and this will further increase the flexibility that administration will have to better place students. In the present situation there will be 38 students moving to St. Peter's, 50 students moving to Fortune/Rollo Bay, and 13 students moving to Cardigan.

In 1990-91 Dundas Consolidated had a population of 117 students. Since that time the enrollment has declined to the present number of 83.

In five years time the number of pre-school children in the area will not cause the enrollment to increase. As the district resources experience
more and more restrictions, it will be difficult to maintain the present level of program offered at the school.

There is no indication that the population in the area will either increase or decrease significantly over the next five years. This is a rural, agricultural and fishery area and the population does not undergo major fluctuations.

There are no known statistics at this time which will indicate that there are approved residential subdivisions approved for this area.

There are no indications that major industrial development will occur in the area. The recentlyannounced initiatives for eastern Kings County do not indicate any significant moves in this regard.

Students will be bussed to the schools indicated above. The manner of division of the student body will provide for an overall efficiency in the busing arrangements. No new buses will be added required to accomplish this re-zoning. The present two buses in Dundas will not be required.

The financial saving that will be realized from this closure and reorganization will amount to (a) $\$ 35,000$ per bus per year for each of the two buses eliminated (b) $\$ 42,210.84$ per year due to the closure of the facility.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## EASTERN <br> KINGS <br> CONSOLIDATED SCHOOL

## Overview

Eastern Kings Consolidated School was constructed in 1975. The building is in good physical condition. The IRMA roof is in good shape. The gym floor has been refinished recently. Approximately $75 \%$ of the wood windows have been replaced. Carpet has been replaced with new tile. Some windows have been replaced.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 135 students.

## Capacity Enrolment

Capacity enrolment is determined to be 150 students.

## Building Code Standards

The building generally has accommodated the intent of the National Building Code.

## Handicap Access

Handicapped is available to the school but not to the gym.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary school program.

## Space Utilization

At present, Eastern Kings Consolidated School is being utilized at $90 \%$ of its optimum student population.

## Building and Maintenance Costs

Eastern Kings Consolidated School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Eastern Kings Consolidated School is running at about $175 \%$ above average for the elementary school group.

## Fuel Costs

Fuel costs are slightly above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about $125 \%$ above average for the elementary school group.

Projected Capital Project Requirements
Given the recommendation for the school disposition, no projected capital requirements are presented.

## School Disposition

Given the potential savins in other sectors of the overall District School Program through improved efficiency of the bus system and increased school utilization, it is recommended that Eastern Kings Consolidated School be closed and the students be relocated to Souris Consolidated School.

Information Re Section (2) Policy
There are insufficient numbers of students to provide a single class per grade. There are insufficient numbers of students to provide

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

adequate time for people working in specialist areas. The amount of teaching time required from the Administration makes it impossible to provide much in the way of teacher supervision or program planning Students are now housed in the area which means that they are closer to their homes. The local Home and School is able to provide support to the school because of it being in the area. This fact provides for good relations within the community.

The steel, bricks and mortar of Eastern Kings is very satisfactory. The school began as an open area and then had walls put in place. This nullified the effect of the air system. To fix this problem would be quite expensive.

Souris Consolidated School is a sound physical structure with no major renovation problems. Souris Consolidated School has a student population of 294 at present. If all remains the same, the 153 children, ages $0-4$ presently in the area will mean that in five years time, the population in Souris will be approximately 255. Eastern Kings population in five years time will be approximately 107 . This would give the combined population of 362 students. Souris Consolidated has optimum space for 425 students. The combined population will be well below optimum usage of the Souris building in five years time.

Students will have a much greater availability of resource, guidance, music, etc. time under a combined status. Students will now be in sufficient numbers to provide two classes at each grade level. This will allow the school much more flexibility in providing programs for each student. The school administration in conjunction with the teachers will be able to group the students in the classes so that maximum benefit will be derived at all subject levels.

Enrollment at Eastern Kings was 136 in 1989-90 and 132 in 1990-91. Since that time the enrollments have declined to the present number of 103. In five years time, the enrollment will be slightly lower as the number of students in the area who are below school age at present will not maintain present student levels when they are in school.

At present, there are 75 children in the area aged $0-4$. This means that if they all remain in the area and no new students come into the area, the school enrollment will be 107 in five years time.

There is no reason at present to predict that the population will increase or decrease significantly over the next few years. Eastern Kings is a rural agricultural and fishing community and the population does not undergo major fluctuations.

There are no known statistics available to indicate what new construction will take place. History, however, tells us that major swings up or down are very unlikely.

There is indication of industrial development in the Souris area. This development, however, is focussed on providing work for people who already reside in the area. There is very little indication that any significant workforce will move into the area and find employment.

The students will all be bussed to Souris Consolidated School. The area which is now zoned to Eastern Kings will move to Souris. This will mean that transportation can be rearranged. All students from Eastern Kings will travel to Souris. This will remove the need for two bus systems. With reorganization of transportation in the Souris district, łwo busses will no longer be required to service the area.

The financial saving which will be accumulated from this reorganization will be:
(a) $\$ 35,000$ per bus per year for each of the two buses eliminated
(b) $\$ 51,441.97$ per year due to the closure of the facility.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## ELIOT <br> RIVER <br> ELEMENTARY <br> SCHOOL

## Building and Maintenance Costs

Eliot River Elementary School is being maintained at about $25 \%$ above average building and maintenance costs.

## Electrical Costs

Eliot River Elementary School is running at about $25 \%$ above average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly above average for the elementary school group.

## Projected Capital Project Requirements

Planning should be undertaken to replace the windows and roof system, (Priority One).

There is no recommendation for change in the boundaries served by these three schools. In total these schools accommodate 1452 students. The populations are as follows:

East Wiltshire 622
Eliot River 407
Westwood 423
1452

## Overview

Eliot River Elementary School was constructed in 1973. The building is in good physical condition. Part of the roof was replaced this year with the balance scheduled for next year. A new gym floor was installed this year. Noted concerns were that the roof is in poor condition, the original windows are in poor condition.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 420 students.

## Capacity Enrolment

Capacity enrolment is determined to be 480 students.

## Building Code Standards

The building generally accommodates the intent of the National Building Code.

## Handicap Access

Handicapped access is available throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

Space Utilization
At present, Eliot River Elementary School is being utilized at $91 \%$ of its optimum student population.

These schools along with Bluefield High School, are served by 31 school buses. When the student body at Bluefield is included in the student population for the area, we have 2349 students. The area from Hampshire to Warren Grove, to York Point to Clyde River, and back to Hampshire has 1170 of these students. We recommend that 324 of these students are within walking distance of the schools they attend. We also recommend that the remaining 846 be served with double bus runs. This should be possible with a minimum of supervision at the schools. The principals and Transportation Supervisor would meet and discuss starting and dismissal times to accommodate this recommendation. If this were to be accomplished, a fleet of 23 buses will be adequate. Seventeen of these buses will have to make double runs. Once these double runs will be completed, twenty-three buses will be adequate to accommodate the remaining 1134 students. This will result in a fleet decrease of eight buses. Each bus will result in an yearly saving of $\$ 35,000$. This will mean a total yearly saving of $\$ 280,000$.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## ENGLEWOOD SCHOOL

## Overview

Englewood School was originally constructed in 1962 and underwent a major addition in 1982. The building has no ventilation system. A new oil tank is currently being installed. The main roof is in good condition.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 335 students.

## Capacity Enrolment

Capacity enrolment is determined to be 450 students.

## Building Code Standards

The building generally accommodates the intent of the National Building Code.

## Handicap Access

No handicapped access is available into the school or between levels.

## Adequacy for Program Delivery

The building as designed is basically suitable to accommodate the elementary program.

## Space Utilization

At present Englewood School is being utilized at $99 \%$ of its optimum student population.

## Building and Maintenance Costs

Englewood School is being maintained at below average building and maintenance costs.

## Electrical Costs

Englewood School is running at about $25 \%$ above average for the elementary school group. likely due to the electrically heated mobiles.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly below average for the elementary school group.

## Projected Capital Project Requirements

The school is recommended for refenestration, new skylights, regrading at the exterior gym entry and new mobiles or construction of permanent class space to replace mobiles, (Priority One).

We are not proposing any changes to the boundaries that now form this school. We do, however, recommend a complete study and overhaul of the bussing system. Buses should be housed at the school building during the day except when it is necessary to have them serviced. There are also some efficiencies that can be realized by doing some double runs and reorganising the routes now in service. We feel that this school can very well do with one less bus than is now in service and also significant saving can result from the discontinuation of driving buses when not transporting students. A steady and more efficient routing schedule will also result in saving. During the 1996-97 school year major
steps have been taken to bring these recommendations into being.

The anticipated savings are $\$ 35,000$ per year for the removal of the bus and saving of $\$ 15,000$ from the more efficient use of buses. This will amount to $\$ 50,000$ in one year or $\$ 500,000$ over a ten-year period.

## FORT

## AUGUSTUS SCHOOL

## Overview

Fort Augustus School was originally constructed in 1954 and underwent a major renovation and addition in 1967. Brick and stucco are in poor condition. Windows are in poor condition and require replacement. Some roof leaks are present in the connector to the mobiles and in the main roof. The finishes generally are in poor condition. The furnace is original.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 250 students.

## Capacity Enrolment

Capacity enrolment is determined to be 275 students.

## Building Code Standards

The building has generally accommodated the intent of the National Building Code.

## Handicap Access

No handicapped access is available.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

## Space Utilization

At present Fort Augustus School is being utilized at $99 \%$ of its optimum student population.

## Building and Maintenance Costs

Fort Augustus School is being maintained at above average building and maintenance costs..

## Electrical Costs

Fort Augustus School is running at about $130 \%$ above average for the elementary school group.

## Fuel Costs

Fuel costs are above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are above average for the elementary school group.

Projected Capital Project Requirements
Given the building disposition, no recommendations are made at this time.

Information Re Section (6) Zoning Policy
At this time it is recommended that no major maintenance be undertaken at Fort Augustus. The building is adequate for school use at present, but it is not advisable to make any renovations. We suggest that this area become a long-term building project. We also recommend that, when construction does take place, the location of the school be moved closer to Stratford. In this way, any additional population increase in this area can be accommodated. We also recommend that, when this re-location takes place, the area now served by Fort Augustus and in proximity to Mt. Stewart be re-zoned to Mt. Stewart Consolidated.

At present the area of Mermaid is dual zoned between Glen Stewart and Fort Augustus. There are 30 students from this zone who now attend Glen Stewart. These 30 students can be easily re-

#### Abstract

assigned to Fort Augustus and the enrolment will still not be to the optimum number which the school can accommodate. The re-assignment of these students to Fort Augustus will help alleviate the overcrowding at Glen Stewart, and it will also mean that the Glen Stewart bus no longer has to serve this area.

FORTUNE
CONSOLIDATED
SCHOOL

## Overview

Fortune Consolidated School was originally constructed in 1968 and was expanded in 1979. The building is in good physical condition. A new roof was installed 10 to 12 years ago. Windows were replaced 8 to 10 years ago. Moisture migration is evident at lower level drywall walls.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 200 students.

## Capacity Enrolment

Capacity enrolment is determined to be 250 students.

## Building Code Standards

The building has generally accommodated the intent of the National Building Code.

## Handicap Access

No handicapped access is available throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present Fortune Consolidated School is being utilized at $42 \%$ of its optimum student population.

## Building and Maintenance Costs

Fortune Consolidated School is being maintained at about $125 \%$ of average building and maintenance costs.

## Electrical Costs

Fortune Consolidated School is running at below average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

## Projected Capital Project Requirements

 It is recommended that the moisture migration through the wall be repaired, (Priority One).Information Re Section (6) Zoning Policy
Dundas Consolidated School is recommended for permanent closure. Because of its location, the students from Dundas will be divided among Fortune/Rollo Bay, St. Peter's, and Cardigan. The boundary between Fortune/Rollo Bay and St. Peter's Consolidated on the south side of the St. Peter's Highway would be described as: all that area starting from the Dingwell's Mills intersection and following a line which will pass the intersection of the Birch Hill Road and the Albion Road Route \#327, southward through the intersection of the Gay Road and the Cumberland Road Route \#310 and then south to
the eastern end of the bridge crossing the Boughton River in Bridgetown thence along the Boughton River until it meets the present boundary between Dundas Consolidated and Fortune/Rollo Bay Consolidated. All students in this area will now be served by Fortune/Rollo Bay Consolidated and Souris Regional High School. On the north side of the St. Peter's Highway the dividing line will be a line drawn east of Naufrage Harbour across country in a southerly direction passing through the intersection of the Selkirk Road Route \#309 until it meets the St. Peter's Highway. Residents on both sides of the Selkirk Road Route 309 will be served by St. Peter's Consolidated School and Morell Regional High School.

Fortune/Rollo Bay will be receiving the 50 students who were originally assigned to Dundas Consolidated. High School students in this area will now be attending Souris Regional High School. Students on the North Side Road Route \#16 to Naufrage Harbour and the Selkirk Road Route \#309 will now be assigned to St. Peter's Consolidated School and Morell Regional High School.

In 1990-91 the attendance at Fortune/Rollo Bay was 266 students this population has gradually increased to 278 in 1996-97.

There is no indication of significant increase or decrease in this area over the next five years.

Fortune/Rollo Bay can very easily accommodate 370 students. The net gain in students from the two zoning changes above will give Fortune/Rollo Bay about 50 additional students. This number can be very easily accommodated.

There are no known statistics regarding approved residential subdivision in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are changing zones will be accommodated by the present bussing system in Fortune/Rollo Bay with a reduction of one bus, and those reassigned to St. Peter's will be adequately accommodated with the present bussing system in St. Peter's.

The impact of this reassignment of students will be increased opportunity for the students both at Fortune/Rollo Bay and those joining from Dundas. The increased number of students in Fortune/Rollo Bay will allow the school administration more options to group students for educational advantage.

## Pupil Counts by Grade

## Grand Total for all Schools

## GEORGETOWN ELEMENTARY SCHOOL

## Adequacy for Program Delivery

The building although not fancy is suitable to accomodate the elementary program.

## Space Utilization

At present Georgetown Elementary School is being utilized at approximately $61 \%$ of its optimum student population.

## Building and Maintenance Costs

Georgetown Elementary School is being maintained at below average building and maintenance costs.

## Electrical Costs

Georgetown Elementary School is running at slightly below average electrical costs for the elementary school group.

Fuel Costs
Fuel costs about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at below average for the elementary school group.

## Projected Capital Project Requirements

Capital planning should be undertaken to replace the storm windows in the short term and the main roof in the intermediate term. The washroom ventilation system should also be upgraded to be effective.

Information Re Section (6) Zoning Policy Georgetown Consolidated School is located on a peninsula. Cardigan Consolidated School, located next to Georgetown, is operating at near capacity. Due to geography it is very difficult to reassign students from the Cardigan area to Georgetown. It is recommended that the boundary between the two schools be as stated in the discussion on Cardigan Consolidated: from the present entrance to the Brudenell River Park thence in a northerly direction along the highway which intersects with the Georgetown Highway Route \#3 to the intersection of the highway and the Emmerson Highway Route \#342 and extended in the same line to the bank of the Cardigan River and then all the territory located to the east of this boundary.

The new boundary will not provide Georgetown with a large amount of students. Using present figures, Georgetown will gain about 25 students in total.

In 1990-91 the enrollment at Georgetown was 113 students. The population of Georgetown has gradually decreased to the 105 students in 199697.

There is no indication that there will be an increase or decrease in the population of this area over the next five years.

Georgetown Consolidated can accommodate 175 students. The net gain from the increased zoning will not bring the student numbers in Georgetown close to the optimum number of students that the building can accommodate.

There are no known statistics regarding approved residential subdivision in this area.

At present there are no known plans for any significant industrial development in this area.

The students who will be changing from Cardigan Consolidated to Georgetown Consolidated will be accommodated with the same bussing arrangements that now exist between Cardigan and Georgetown.

The impact of the change for the students from Cardigan to Georgetown will not be significant. There will be no extra travel involved and the reassignment will provide more opportunity for the administration at Georgetown to institute more planning time for both administration and teachers.

There will be no significant financial impact from this rearrangement. There will be no increase or decrease in buses to serve these schools.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## GLEN <br> STEWART ELEMENTARY SCHOOL

## Overview

Glen Stewart Elementary School was originally constructed in 1974 and underwent a major renovation and addition in 1989. The building is in good physical condition. The carpet was removed this past summer. The ventilation system is to be upgraded this year. No problems were reported or observed with the major building systems.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 550 students.

## Capacity Enrolment

Capacity enrolment is determined to be 600 students.

## Building Code Standards

The building has generally accommodated the intent of the National Building Code.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

## Space Utilization

At present Glen Stewart Elementary School is being utilized at $133 \%$ of its optimum student population.

## Building and Maintenance Costs

Glen Stewart Elementary School is being maintained at about $160 \%$ above average building and maintenance costs.

## Electrical Costs

Glen Stewart Elementary School is running at about $200 \%$ above average for the elementary school group.

## Fuel Costs

Fuel costs are well above average for the elementary school group.

Total Operation and Maintenance Costs
Total operating and maintenance costs are well about average for the elementary school group.

## Projected Capital Project Requirements

No recommendations are presented at this time.

## Information Re Section (6) Zoning Policy

Glen Stewart School will retain its present boundary with Fort Augustus except in the Mermaid area which will no longer be dual zoned. The Mermaid area will now be assigned to Fort Augustus in total. The eastern boundary of Glen Stewart will be the newly-described boundary for the Vernon River School.

Fort Augustus has 216 students. The additional 30 students from the Mermaid area will bring the Fort Augustus enrolment to 246 students which is near but below the optimum number of students for that school. The additional 120 students to the
east who were originally in Glen Stewart will now be assigned to Vernon River.

In 1990-91 the population in Glen Stewart was 798. In 1996-97 the population is 720.

There are indications that the student population is this area may increase over the next five years. The number of students recommended for reassignment will ease this problem should it begin to occur over the next five years. In five years time the new construction to cover the Fort Augustus area should be in place. This construction will have the advantage of looking at the population trend from the present until such time as plans are in place for the building.

The changes in population suggested for fort Augustus and Vernon River will bring these schools close to optimum operation. The decrease in population in Glen Stewart will once again put this school in the situation that is has a student body which is also at optimum for the operation of this school. The 120 students now reassigned to Vernon River will bring the Vernon River population to 339 which is still below optimum. The 30 students reassigned to Fort Augustus will bring the population in this school to 246.

There are statistics available which indicate development of various subdivisions in this area. There are also statistics that indicate some subdivisions in the area will be producing fewer school-age children. The adjustments listed in regard to Fort Augustus and Vernon River should take care of any increases over the next few years.

At present, there are no known statistics for any significant industrial development in this area. There are statistics that indicate that there will be increases in the service industry over the next five years. It is anticipated that the new subdivision development mentioned earlier will take care of any increase in population resulting from this service increase.

Students who are changing zones will be accommodated by the bussing arrangements
that were discussed in the reviews of Fort Augustus and Vernon River.

The impact on the educational program should be positive in all areas. Where there was overcrowding we have recommended a decrease in students. Where there was room for expansion we have recommended increases in student numbers equal to the decrease in the overcrowded area. The net result should be a more positive educational experience for all students in the three schools in questions.

In the long term, there will be capital costs involved with the new school construction recommended. In the short term there should be a more efficient bussing program for all schools involved. At present these schools have reduced bus fleets so that they are operating quite efficiently. We do not anticipate further removal of buses from the schools affected by this change. We also do not see any cost increase due to the recommended moves. We feel that the reassignment suggested will lead to greater overall efficiency and hence cost savings.

Pupil Counts by Grade
Grand Total for all Schools

## GRAND <br> TRACADIE <br> ELEMENTARY SCHOOL

## Building and Maintenance Costs

Grand Tracadie Elementary School is being maintained at in excess of $200 \%$ above the average building and maintenance costs.

## Electrical Costs

Grand Tracadie Elementary School is running at slightly below average electrical costs for elementary schools.

## Fuel Costs

Fuel costs for Grand Tracadie Elementary School are running at about $200 \%$ above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about $160 \%$ above average for the elementary school group.

## Projected Capital Project Requirements

Given the recommendation for the school disposition, no projected capital requirements are presented.

## School Disposition

Given the low student utilization, the condition of the existing building and the potential for saving in other sectors of the overall District school program through improved efficiency of the bus system and increased school utilization, it is recommended that Grand Tracadie Elementary School be closed and the students be relocated to Tracadie Cross Consolidated and L.M. Montgomery Elementary Schools.

## Information Re Section (2) Policy

Grand Tracadie has student numbers which are insufficient to provide any arrangement other than at least two grade levels per classroom. Specialist services are on a part-time basis. The amount of teaching time required from Administration makes it impossible to provide much by way of teacher supervision or program planning time. In the present setting, the students are housed close to home and in a small environment. This allows the Home and School and parents to retain close contact with the school and at the same time to be very supportive of the education program offered at the school.

Grand Tracadie School was build in 1960 and has not received any renovations since that time. Regular maintenance has taken place over the years. The building does not meet the standards which are normally required for today's schools. The cost of maintaining the structure is well above acceptable limits.

Tracadie Cross School, which is close by, has accommodations for approximately 100 more students than now occupy the building. One half the students who now attend Grand Tracadie plus about twenty who now attend school in the Charlottetown area can be very easily re-zoned to Tracadie Cross. This will free sufficient spaces in L. M. Montgomery for the Grand Tracadie students who live in the west of the district. It is not be a good use of resources to bus these students to Tracadie Cross.

The major positive impact on students moving from Grand Tracadie to the schools mentioned above will be the greater flexibility that can be offered in programming. Specialist services already present at Grand Tracadie will be reassigned along with the students. This will increase specialist time and resources in these schools. Administrators in the receiving school will have more flexibility to place students in classes which will provide the best possible learning situation for the students.

Enrollment at Grand Tracadie has increased from 41 in 1990-91 to 55 in 1996-97.

In five years time the pattern followed by present students will likely be consistent. This will mean that this school will not experience increased enrollment. Even if the school did experience increases, it would have room for very few more students.

There is no indication that there will be a significant increase or decrease in the population in this area. This is a rural area which traditionally does not experience great movement in population.

At the present time there are no known statistics to indicate that there will be new housing in this area.

There are no known plans for any industrial development in this area in the immediate future.

The students in the area will be bussed to the schools indicated above. The manner of division suggested will provide for efficiency in the bussing system.

The financial saving which will be accumulated from this reorganization will be:
(a) $\$ 35,000$ per year for the bus which will be eliminated
(b) $\$ 24,926.98$ per year due to the closure of the facility.

Grand Total for all Schools

## GULF <br> SHORE <br> SCHOOL

## Overview

Gulf Shore School was constructed in 1990. The building is in very good physical condition. No problems were reported or observed with the major building systems.

## Optimum Student Enroliment

The optimum student enrolment is determined to be 375 students.

## Capacity Enrolment

Capacity enrolment is determined to be 400 students.

## Building Code Standards

The building has been constructed to accommodate the intent of the National Building Code.

## Handicap Access

The design of the building made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary school program.

## Space Utilization

At present Gulf Shore School is being utilized at
$98 \%$ of its optimum student population.

## Building and Maintenance Costs

The Gulf Shore School is being maintained at slightly below average building and maintenance

costs. This is understnadable for an essentially new building.

## Electrical Costs

The Gulf Shore School are running at above average.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

## Projected Capital Project Requirements

No capital projects are anticipated for the Gulf Shore School beyond normal maintneance.

Information Re Section (6) Zoning Policy
For a number of years an area existed in the Wheatly River, Oyster Bed Bridge area which was dual zoned between Gulf Shore and Central Queens Consolidated. We recommend that this dual zone be eliminated and that the division boundary be as follows: A line crossing Highway Route \#224 approximately one kilometer west of the intersection of Highway Route \#224 and Highway Route \#243, thence in a easterly direction immediately north of Highway Route \#224, the intersection of Highway Route \#224 and Highway Route \#243 and thence easterly immediately north of Highway Route \#251 to the south of the intersection of Highway Route \#251 and Highway Route \#7, thence south of Highway Route \#251 and Highway Route \#223 until it
reaches the present boundary of Gulf Shore School. All residents north of this line will now attend Gulf Shore Consolidated and all residents south of this line will attend Central Queens Consolidated School.

This division will not mean any significant change for students in the area. Over the years this division has gradually come into being. At present there area a few students who attend outside this zone. This will be completely eliminated in the future.

Sections (c) - (i) in the zoning policy (see appendix B)

Will not impact on the re-assignment of the area zoned to these schools.

With double bus runs it appears that four buses will be sufficient to serve the area. This means that the cost reduction will capitalize on efficiencies that will occur in the runs as well as the $\$ 35,000.00$ per year saving from the elimination of one bus.

## L.M. MONTGOMERY ELEMENTARY SCHOOL

## Overview

L.M. Montgomery Elementary School was constructed in 1983. The building is in good physical condition. Windows on the west side have lost their seal. The roof has minor leaks. Minor cracks are present in the block masonry. A security system is being considered for the building.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 350 students.

## Capacity Enrolment

Capacity enrolment is determined to be 375 students.

## Building Code Standards

The building generally accommodates the intent of the National Building Code.

## Handicap Access

Handicapped access is provided into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

Space Utilization
At present L.M. Montgomery Elementary School is being utilized at $100 \%$ of its optimum student population.

## Building and Maintenance Costs

L.M. Montgomery Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

L.M. Montgomery Elementary School is running at well below average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about $25 \%$ below average for the elementary school group.

Projected Capital Project Requirements
It is recommended that the affected double glazed units be replaced and the roof leaks be repaired, (Priority One).

## Information Re Section (6) Zoning Policy

Grand Tracadie Consolidated School is recommended for permanent closure. The students from Grand Tracadie that were not assigned to Tracadie Cross will be assigned to L . M. Montgomery. The boundary for L. M. Montgomery will be described as follows: on the east the boundary for L. M. Montgomery will be the western boundary described for Tracadie Cross Consolidated. The dual boundary between L. M. Montgomery and Grand Tracadie will cease to exist and all boundaries other than the newly-
described eastern boundary will remain intact for L. M. Montgomery.

All students in the area described above will be assigned to L. M. Montgomery school.

In 1990-91 the student population in L. M. Montgomery was 364. This present school year 1996-97 the population in L. M. Montgomery is 373.

There is no indication that the student population in this area will increase or decrease during the next five years.

At one time L. M. Montgomery held 424 students. The number of students who are reassigned from the Bedford area will create spare room in L. M. Montgomery. L. M. Montgomery will gain 33 students from the Grand Tracadie area. This will bring the enrollment in L. M. Montgomery back to where it presently stands or maybe slightly higher.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for industrial development in this area.

The students who are reassigned from Grand Tracadie will be accommodated by the bussing system presently serving L. M. Montgomery.

The impact of this reassignment will give increased opportunity for the students now attending Grand Tracadie.

The financial impact of this realignment has been discussed under the Grand Tracadie School recommendations.

## MONTAGUE CONSOLIDATED SCHOOL

## Building and Maintenance Costs

Montague Consolidated School is being maintained at below average building and maintenance costs.

## Electrical Costs

Montague Consolidated School is running at well below average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

Total Operation and Maintenance Costs
Total operating and maintenance costs are at below average for the elementary school group.

## Projected Capital Project Requirements

It is recommended the windows be replaced, new permanent partitions be installed and handicapped access be provided to the gym level, (Priority One).

## Information Re Section (6) Zoning Policy

Montague Consolidated School has a maximum capacity of 575 students. For the past four years this school has had enrollments in excess of 485 students. There is no indication that this will change to any significant degree in the next five years. The present boundaries of Montague Consolidated seem to be adequate to keep the school operating at or very near maximum enrollment and efficiency for the next five years.

## MORELL

 CONSOLIDATED SCHOOL
## Overview

Morell Consolidated School was originally constructed in 1967. The building is in good physical condition. The original roof was reedged. New windows were installed 5 years ago. A new gym floor has been installed. The building has no ventilation system. The heating control is in need of repair. The handicapped lift is in poor condition.

## Optimum Student Enroliment

The optimum student enrolment is determined to be 400 students.

## Capacity Enrolment

Capacity enrolment is determined to be 425 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code.

## Handicap Access

Handicapped access is available into and around the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present Morell Consolidated School is being utilized at $56 \%$ of its optimum student population.

## Building and Maintenance Costs

Morell Consolidated School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Morell Consolidated School is running at about $75 \%$ of average for the elementary school group.

## Fuel Costs

Fuel costs are below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are below average for the elementary school group.

Projected Capital Project Requirements
It is recommended the handicapped lift be repaired, (Priority One).

Information Re Section (6) Zoning Policy
The eastern boundary of Morell Consolidated School corresponds to the western boundary of St. Peter's Consolidated School on the east. It then proceeds westwardly from the intersection of the Church Road Route \#331 and the Cardigan Road Route \#313 to the end of the present pavement on the northern end of Milburn Road Route \#337, then westwardly to the intersection of the Martinvale Road Route \#321 and the Peakes Road Route \#320, thence westwardly to the intersection of the Riverton Road Route \#355 and the Hazelgreen Road Route \#329, thence to the intersection at Leard's Mill, thence to the intersection of the Byrne Road Route \#322 and
the Peakes Road Route \#320, thence along the Byrne Road Route \#322 to Green Meadows, thence across country to the intersection of the St. Peter's Road Route \#2 and the West St. Peter's Road, thence across country to the intersection of the Canavoy Road Route \#350 and the St. Peter's Road Route \#2 thence west along the Canavoy Road Route \#350 to the French Village Road Route \#217 and thence across country to the intersection of the Pt. DeRoche Road Route \#218 and the Anderson Road. Resident on the St. Patrick's Road Route \#323 formerly zones to Morell will now be zoned to Mt. Stewart Consolidated.

There is no indication that the population in this area will change much over the next five years. The school will continue to integrate its bussing system with Morell Regional High School.

## MT. STEWART <br> CONSOLIDATED <br> ELEMENTARY SCHOOL

## Overview

Mt. Stewart Consolidated Elementary School was constructed in 1976. The building is in good physical condition.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 225 students.

## Capacity Enrolment

Capacity enrolment is determined to be 240 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code.

## Handicap Access

A handicapped ramp is available.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary.program.

## Space Utilization

At present Mt. Stewart Consolidated Elementary School is being utilized at near its optimum student population.

## Building and Maintenance Costs

Mt. Stewart Consolidated Elementary School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Mt. Stewart Consolidated Elementary School is running at slightly above average for the elementary school group.

## Fuel Costs

Fuel costs are slightly above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at slightly above average for the elementary school group.

## Projected Capital Project Requirements

There are no recommendations at this time.
Information Re Section (6) Zoning Policy
St. Teresa's Consolidated is recommended for permanent closure. Because of its location, the students from St. Teresa's will be divided between Cardigan and Mt. Stewart, with Mt. Stewart receiving the greater number. The boundary between Mt. Stewart Consolidated and Morell Consolidated would be described as: the western boundary as described for Morell Consolidated from the intersection of the Anderson Road and the Desroche Road Route \#218 to the intersection of the Lorne Valley Road and the road from Leard's Mill Road Route \#355, thence on a line drawn southerly from this intersection to the intersection of the 48 Road Route \#5 and the Baldwin's Road Route \#22, thence southwest to Brothers Road Route \#320 at the end of the present pavement, thence to the intersection of the Pisquid Road Route \#216 and the 48 Road

Route \#5, thence to the intersection of the Ryan's Road and the Pisquid Road Route \#216, thence north to the intersection of the Dromore Road Route \#214 and the McGuirk Road, then to the intersection of the Kelly Mt. Road and the Pisquid Road Route \#216, thence to the intersection of the Dromore Road Route \#214 and the McCarvelle Road Route \#255, thence north on a line to pass through where the former C.N. tracks intersect with the Fort Augustus Road Route \#21 and then in a straight line to the Hillsborough River, thence on to the point of commencement.

Mt. Stewart Consolidated will receive 61 of the students who presently attend St. Teresa's Consolidated. High School students from this area will continue to attend Morell Regional High School.

In 1990-91 the population at Mt. Stewart was 105 students. In 1996-97 the number of students in Mt. Stewart is 114.

During the next five years there is no indication that there will be an increase or decrease in the student population.

Mt. Stewart school can easily accommodate 200225 students. The net gain in students from this reassignment of students will leave Mt. Stewart with room to accommodate additional students.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are changing zones will be accommodated by the present bussing system that is in place for Mt. Stewart Consolidated School.

The impact of the reassignment of these students will be increased opportunity for the students at both St. Teresa's and Mt. Stewart. The increased numbers will allow the administration at Mt. Stewart more options to group students for educational advantage.

The financial impact of this re-zoning was addressed when we dealt with the permanent closure of St. Teresa's Consolidated. The increase in costs for Mt. Stewart will be minimal.

## PARKDALE ELEMENTARY SCHOOL

## Space Utilization

At present Parkdale Elementary School is utilized at its optimum student population.

## Building and Maintenance Costs

Parkdale Elementary Schoo is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Parkdale Elementary School is running at about $50 \%$ of the average for the elementary school group.

## Fuel Costs

Fuel costs slightly below average for the elementary school group. Despite this it was noted during the inspection that the heating control was not functioning and had not been functiong properly.

## Total Operating and Maintenance Costs

Total operating and maintenance costs are slightly below average.

## Projected Capital Project Requirements

The major capital expenditure which should be planned for is the addition of a new gymnasium, (Priority One). In the intermeniate term, financial planning should be given to replacing the roof,(Priority Two). Although no handicapped students are currently enrolled in the school, planning should be undertaken to install a handicapped access into the building, (Priority Two). The heating control system should be repaired (Priority One).

## Information Re Section (6) Zoning Policy

Parkdale School serves a portion of the city of Charlottetown to the east as well as they area on the Brackley Point Road from the northern boundary of Sherwood School to the North Shore. The area within the city will see students walk to school, while the students on the Brackley Point Road will be served by bus. Parkdale School is the only school in the city area which does not have a gymnasium attached to the school. Gymnasium facilities are provided by Park Royal United Church which is located some distance from the school. This arrangement is not satisfactory and it is recommended that gymnasium and related facilities should be added to this school as soon as possible. The areas that will form the new Parkdale School Zone are listed as follows: Beginning at the intersection of the CN Right-of-way and Belvedere Avenue then along the center of Belvedere Avenue to the intersection of Belvedere Avenue, Brackley Point Road and St. Peter's Highway, then along the center of Falconwood Drive extended to the waterfront, then along the waterfront in a westerly direction to the eastern boundary of the new Prince Street boundary then northerly along the former CN Right-of-way to the place of commencement. Brackley Point Road - Students in the area bounded on the east by the western boundary of L. M. Montgomery, on the south by the new northern boundary of Sherwood School, on the west by a line drawn between the Brackley Point Road and the Winsloe Road cutting Highway 220 midway between the Brackley Point Road and the Winsloe Road, the northerly cutting Highway 250 midway between the Brackley Point Road and the Winsloe Road then northerly along the eastern boundary of Gulf Shore School to the Gulf of St. Lawrence and then easterly along the Gulf of St. Lawrence to the point of commencement will attend Parkdale Elementary, Stonepark Junior High and Charlottetown Rural High School.

All students within the zones listed above will attend Parkdale School with the exception of early French Immersion students. Early French

Immersion students within this zone will attend Sherwood School.

Over the past five years the student population at this school has fluctuated from 179 to 202. The school is well capable of holding 250 students. In 1996-97 the population in this school is 210 students.

The suggested zoning will increase the population in Parkdale to 238 students. There is no indication that the population in the area will increase over the next five years. Should there be a modest increase the school will have no problem accommodating the students.

The optimum enrollment in Parkdale is 250 students. With the addition of a gymnasium and additional washrooms/change rooms Parkdale will be able to accommodate 300 students.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who live in the Brackley Point Road area will be bussed to school. All other students in this zone are within one kilometre of the school and will walk to school.

There will be no educational impact from this rezoning. With a few more students, this school will have some more flexibility with its schedule.

This re-zoning is part of the overall reorganisation of the city area. It is difficult to pinpoint exact savings by school; however, the overall financial impact will be positive.

## PRINCE <br> STREET ELEMENTARY SCHOOL

## Building and Maintenance Costs

Prince Street Elementary School is being maintained at slightly above average building and maintenance costs.

## Electrical Costs

Prince Street Elementary School is running at below average for the elementary school group.

## Fuel Costs

Fuel costs slightly above average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at slightly below average for the elementary school group.

## Projected Capital Project Requirements

Given the tight sight constraints which must provide building, parking, bus drop off and playground, it is unlikely that the gym can be expanded. A planning investigation should be undertaken to confirm this. Planning should be undertaken to make arrangements for repairs and replacement to the roof, windows, and painting in the short term, (Priority One). Handicapped ramp and a lift should be installed, (Priority Two).

Information Re Section (6) Zoning Policy
Prince Street School serves a portion of the Charlottetown area as well as areas which are bussed from outside the city. The new zoning arrangements for Prince Street includes a portion
of the city area within walking distance of the school as well as an area outside the city which will have to be transported to the school. The areas that will form the new Prince Street zone are listed as follows: Beginning at the intersection of University Avenue and Nassau Street, thence easterly to the former CN Right of Way, then southerly along the former C. N. Right of Way to the waterfront, then along the waterfront to the new eastern boundary of St. Jean School, then along the center of Great George Street and University Avenue to the point of commencement.

Hillsborough Village: Students in the area known as Hillsborough Village beginning at the intersection of the new Hillsborough Development and the new Sherwood school boundary southward along the new eastern boundary of Sherwood school to the water then along the shore line to Wright's Creek and Andrew's Dam to the boundary of Hillsborough Development then westerly along the southern boundary of Hillsborough Development to the point of commencement will attend Prince Street School, Queen Charlotte/Birchwood Intermediate, and Colonel Gray Senior High School.

All students within the zones listed above will attend Prince Street School with the exception of Early French Immersion students. Early French Immersion students within this zone will attend St. Jean School.

During the past five years the students attending this school have fluctuated from 337 to 405 . This fluctuation was caused by different bussing arrangements. The population at Prince Street in 1996-97 is 401 students.

The number of students in the new proposed zone is 383 . Figures indicate that this number will decrease slightly over the next five years.

There will be adequate space available at Prince Street for the students in the new proposed zone. There will be a few less students than are already housed at Prince Street.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

All students within the city area now zones to Prince Street are within walking distance of the school. Transportation will be provided students who live outside one kilometer of the school.

There will be no educational impact from this rezoning.

Once again this area becomes part of the overall reorganisation of the city area. It is difficult to pinpoint exact savings by school; however, the overall financial impact will be positive.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## SOURIS CONSOLIDATED SCHOOL

## Electrical Costs

Souris Consolidated School is running at about $50 \%$ of its average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the senior high school group.

Projected Capital Project Requirements
There are no recommendations at this time.
Information Re Section (6) Zoning Policy
Eastern Kings Consolidated School is recommended for permanent closure. This means that the entire student body will be transferred to Souris Consolidated. The boundary between Eastern Kings and Souris will disappear completely. The western boundary of Souris will remain intact as follows: all that area east of a line drawn on the north side road Route \#16 half way between Route \#305 and \#306 and hence southward cutting the Souris River Road at the intersection of the Grant Road Route \#304. All of the New Zealand Road and the western end of the Souris River Road to the Grant Road are served by Rollo Bay/Fortune Consolidated.

The school receiving students from Eastern Kings Consolidated will be Souris Consolidated.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

Since the 1990-91 school year, the population in Souris Consolidated has increased marginally per year from 279 students to the present 294 students.

During the next five years the student population from the Eastern Kings area will decrease to 99 students. The population in the Souris area will remain constant.

Souris Consolidated is well able to handle 425-450 students. The numbers projected here for the next five years will not exceed 400 students.

There is no known information in regard to new subdivisions available for future housing in this area.

There are current plans for industrial development in the area. This development is mainly designed to provide work for people who presently live in the area. There is no indication that new development in the Souris area will provide jobs to entice a population shift to this area.

The students from the Eastern area will be transported on the buses which now serve the high school students in the area. There will be a rearrangement in the busses serving the Souris area because the buses from the east will be filled much sooner under the new arrangement because they are serving all students in the area. Buses serving the Souris area at present will have to come further east to pick up some high school students served by the eastern buses now. These buses will also likely have to pick up some of the Eastern Kings Consolidated students now served by Eastern Kings busses. The present fleet of buses serving Souris area will be sufficient to serve the expanded area.

The impact on the educational program for all the concerned students was discussed in the recommendation to close Eastern Kings. In this discussion, the proposed arrangement offers benefits to students from both jurisdictions.

The financial saving from this arrangement will come from the closure of the building in Eastern

Kings and the removal of two buses from the combined runs. The savings have been projected in the closure of Eastern Kings.

# ST. JEAN <br> ELEMENTARY SCHOOL 

## Overview

St. Jean Elementary School was originally constructed in 1962. The building is generally in good physical condition. Staff parking is problematic in its current configuration. The bus drop-offs was reconfigured last year. The gym is "tight" but suitable for an elementary school. The largest "problem" is the school suffers an image problem. The connector to the gym has been repaired.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 500 students.

## Capacity Enrolment

Capacity enrolment is determined to be 500 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The building is not handicapped accessible.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

## Space Utilization

At present St. Jean Elementary School is being utilized at $57 \%$ of its optimum student population.

## Building and Maintenance Costs

St. Jean Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

St. Jean Elementary School is running at well below average for the elementary school group.

## Fuel Costs

Fuel costs are below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at below average for the elementary school group.

## Projected Capital Project Requirements

It is recommended that planning be initiated to deal with a facelift to the building, (Priority One).

## Information Re Section (6) Zoning Policy

The new zoning arrangements for St. Jean School have this school housing the early Immersion students for schools within the Colonel Gray family. Students who are zoned to Spring Park school are divided between the Charlottetown Rural family and the Colonel Gray family for junior and senor high school. However, the new area zones to Spring Park School will have early French Immersion at St. Jean School. Depending upon where the students live, they will enter continuing Immersion either at Stonepark or Queen Charlotte. All regular and French Immersion students living in the new zone described below
will attend St. Jean school. The area referred to is described as follows: Beginning at the intersection of University Avenue and Pond Street, then in a southerly direction down the middle of University Avenue and Great George Street to the waterfront, thence in a westerly direction along the waterfront to the new eastern boundary of West Kent School, thence northerly along the new eastern boundary of West Kent to a point immediately north of the intersection of Pond Street and Spring Park Road, and then in an easterly direction to the point of commencement.

All students in the attendance zone described above will attend St. Jean School.

The students who have lived within the new attendance zone described above plus the French Immersion students will bring St. Jean School close to its optimum enrollment.

The projection in this area for the next five years indicates that the student population will steadily decrease by about $25 \%$.

St. Jean has been underutilised for some time. The new projected enrollment for the school will bring it to optimum enrollment for the present. As indicated earlier, the population in the area is decreasing. Even if French Immersion maintains present numbers, there will be adequate space in the school.

There are no known statistics regarding approved residential subdivisions in this area.

At the present time there are no known plans for any significant industrial development in this area.

All students who are zones to this school are within walking distance with the exception of the French walking distance with the exception of the French
Immersion students living outside the new zone. The French Immersion students who live outside the new zone will be transported to St. Jean.

This re-zoning will have no educational impact on the students involved.

This re-zoning is part of the total city plan. As mentioned in the West Kent and Spring Park rezoning, the exact financial saving is difficult to pinpoint but it is definitely positive.

## ST. PETER'S

CONSOLIDATED SCHOOL

## Overview

St. Peter's Consolidated School was originally constructed in 1966. Exterior retaining walls and canopies need repair. Exterior brick requires repointing and windows are in poor condition. The roof has recently been repaired. No ventilation system is present in the building.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 225 students.

## Capacity Enrolment

Capacity enrolment is determined to be 300 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code.

## Handicap Access

The building is not handicapped accessible.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

## Space Utilization

At present St. Peter's Consolidated School is being utilized at $47 \%$ of its optimum student population.

## Building and Maintenance Costs

St. Peter's Consolidated School is being maintained at average building and maintenance costs.

## Electrical Costs

St. Peter's Consolidated School is running at below average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at slightly below average for the elementary school group.

## Projected Capital Project Requirements

It is recommended the unused Science cabinets be removed, exterior retaining walls, canopies and brick be replaced or repaired and that planning be undertaken to replace the windows, (Priority One).

Information Re Section (6) Zoning Policy
Dundas Consolidated is recommended for permanent closure. Because of its location, the students from Dundas will be divided among Fortune/Rollo Bay, St. Peter's, and Cardigan. The boundary between St. Peter's Consolidated and Morell Consolidated, Cardigan Consolidated and Fortune/Rollo Bay Consolidated would be described as follows: The east side of Midgell
bridge along the Midgell river and following a line to the intersection of the Church Road Route \#331 and the Cardigan Road Route \#313 then southward to the intersection of the Strathcona Road Route \#312 and the Seven Mile Road Route \#4 and thence eastwardly along the Seven Mile Road Route \#4 to the west side of the bridge in Bridgetown and thence along the Clay Road Route \#328, to the intersection of the Gay Road Route \#339 and the Cumberland Road Route \#310, and then along the Clay Road Route \#328 to the intersection of the Clay Road Route \#328 and the Birch Hill Road, then in an easterly direction to the Dingwell's Mill Intersection, thence northerly along the Selkirk Road Route \#309 to the North Side Road Route \#16 and eastward to Naufrage Harbour. Residents on both sides of the Selkirk Road Route \#309 will be served by St. Peter's Consolidated School and Morell Regional High School.

St. Peter's Consolidated will be receiving 38 students who were originally assigned to Dundas Consolidated and 18 students who were originally at Fortune/Rollo Bay Consolidated.

In 1990-91 the attendance at St. Peter's was 117 students. This population has gradually increased to 121 students in 1996-97.

There is no indication that there will be any increase or decrease in the population in this area over the next five years.

St. Peter's Consolidated can accommodate 225 students. The net gain in students from the two zoning changes will give St. Peter's Consolidated an enrollment of 182 students. This is well below the number that can be accommodated at St. Peter's.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are changing zones will be accommodated by the present bussing system in place at St. Peter's

The impact of the reassignment of students from Dundas to St. Peter's will result in increased opportunity for the students from both schools. The students who are moving from Fortune/Rollo Bay will be changing to an environment very similarly to the one they left.

The financial impact will be a much more streamlined transportation system. Savings which will result from this change have already been discussed with the closure in Dundas.

## ST. TERESAS CONSOLIDATED SCHOOL

## Building and Maintenance Costs

St. Teresas Consolidated School is being maintained at about $125 \%$ of the average building and maintenance costs.

## Electrical Costs

St. Teresas Consolidated School is running at about $80 \%$ of the average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

## Projected Capital Project Requirements

Given the recommendation for the school disposition, no projected capital requirements are presented.

## School Disposition

Given the low student utilization and the potential for savings in other sectors of the overall District School Program through improved efficiency of the bus system and increased school utilization, it is recommended that St. Teresas Consolidated School be closed and the students be relocated to Vernon River, Mt. Stewart and Cardigan Consolidated.

Information Re Section (2) Policy
The population of St. Teresa's School is such that at least two grades to a class are a necessity. Specialist services can be provided only on a part-time basis. The administration has to devote full time to teaching which leaves very little time for teacher supervision or program planning. The necessary information required to operate any school becomes a real problem in a school of this size. The community in St. Teresa's is very strong and is very supportive of the school. The Home and School is a strong body and is very active. This community brings more people to meetings than schools many times larger.

The school was built in 1989 and is in excellent physical condition. The building is bright and provides very adequate housing for the students.

Mt. Stewart Consolidated is adjacent to St. Teresa's. The building in Mt. Stewart is operating about 125 students below optimum. All but 8 of the present student body in St. Teresa's will be reassigned to Mt. Stewart. This will bring the Mt. Stewart population to about 180 students. The remaining 8 students will be reassigned to Cardigan. Cardigan is presently operating at capacity, but zoning arrangements will free a number of spaces in Cardigan which will accommodate the number of students that will be assigned to Cardigan.

The major positive impact on the St. Teresa's students moving to Mt. Stewart and Cardigan will be that there will be sufficient numbers to provide greater flexibility in the grade arrangements in each classroom. Specialist services presently in St. Teresa's will be reassigned along with the students, hence increasing specialist time and resources at the receiving schoois. In some cases the students will be moving to a school which will have the flexibility of two classes per grade. This situation will provide the school administration with the flexibility to better place students.

In 1990-91 the enrollment in St. Teresa's was 74. Since that time the enroliment has declined to 69.

In five years' time the number of preschool children will not cause the enrollment to increase significantly. As the District resources experience more restrictions, it will be difficult to maintain the present level of program offered at the school.

There is no indication that the population in the area will either increase or decrease significantly over the next five years. This is a rural, agricultural area and the population does not undergo major fluctuations.

There are no known statistics at this time in regard to any approved subdivisions for housing this area.

There is no indication that industrial development will occur in the area. It appears that the traditional way of life will continue in this area.

Students will be bussed to the schools indicated above. The students are divided in such a way that there will be overall efficiency in the bussing arrangements. This closure will require no additional buses in Mt. Stewart or Cardigan. The two buses presently in St. Teresa's will no longer be required.

The financial savings that will be realized from this closure and reorganization will include
(a) $\$ 35,000$ per bus per year for each of the two buses eliminated
(b) $\$ 29,828.83$ per year due to the closure of the facility.

## SHERWOOD ELEMENTARY SCHOOL

## Overview

Sherwood Elementary School was originally constructed in 1953 and underwent a major renovation and addition in 1991. This building is unnecessarily dirty. The heating system has poor control. Exterior asphalt is deteriorating. Partitions added toward the gymnasium have created unsafe dead-end corridors. The library (interior space) has poor ventilation and heat control. 14 classes remain to have their windows replaced next year. There is no ventilation system in the building.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 600 students.

## Capacity Enrolment

Capacity enrolment is determined to be 625 students.

## Building Code Standards

The building has not accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

Space Utilization

At present Sherwood Elementary School is being utilized at $97 \%$ of its optimum student population.

## Building and Maintenance Costs

Sherwood Elementary School is being maintained at average building and maintenance costs.

Electrical Costs
Sherwood Elementary School is running above average for the elementary school group.

## Fuel Costs

Fuel costs are about average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are slightly above average for the elementary school group.

## Projected Capital Project Requirements

It is recommended that planning be undertaken to replace the asphalt pavement in the intermediate term (Priority Two), ventilation be replaced in the short term, Priority One. This building should be thoroughly cleaned immediately.Priority One. The dead end corridor needs to be popened to allow safe exiting, Priority One.

## Information Re Section (6) Zoning Policy

Sherwood School will house the early French Immersion students within the Charlottetown Rural High School Family. Sherwood school serves the area of The City of Charlottetown known as the Community of Sherwood as well as students who
are bussed from outside the area. The areas which will form the new Sherwood zone are as follows:

Sherwood: Beginning where the eastern boundary of the new Parkdale boundary reaches the Waterfront thence along the Waterfront to a point where the Waterfront meets Riverside Drive extended thence northward along Riverside Drive to the underpass on Oak Street extended thence northward along Norwood Road until it intersects with Union Road then westward to the intersection of the Sherwood Road and Brackley Point Road. Then along the Sherwood Road until it intersects with the Mt. Edward Road, then along the Mt. Edward Road to the former CN Right of Way then South to the new Parkdale boundary, thence eastward along the new northern boundary of Parkdale to the point of commencement.

Students living in the zones described above will attend Sherwood School.

Over the past five years the attendance at Sherwood School has varied from a high of 605 in 1992-93 to a low of 557 in 1991-92. During 1996-97 the attendance at Sherwood School is 638.

The student body from the new zoning arrangements at Sherwood school will see a population of 583 students for the 1996-97 School year. There is no indication that this attendance will increase or decrease to any major extent during the next five years.

The optimum enrollment at Sherwood School is 600-625 students. The proposed changes to the zoning will not cause the population within the school to exceed 625 students.

At present there are no known statistics regarding approved residential subdivision in this area.

At present there are no known plans for any significant industrial development in this area.

Students who are zoned to this school area, who are outside walking distance, will be transported to Sherwood. The early French Immersion
students who live outside the zone will be transported to Sherwood.

The re-zoning at this school will have no impact on the educational program which is offered at this school.

The re-zoning at this school is part of the total city plan. As mentioned in the re-zoning at other schools the exact financial saving is difficult to pin point, but it will be positive as in the other cases.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## SOUTHERN <br> KINGS <br> CONSOLIDATED SCHOOL

maintenance costs.
Electrical Costs
Southern Kings Consolidated School is running at about $80 \%$ of average for the elementary school group.

## Fuel Costs

Fuel costs are slightly below average for the junior high school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are about $125 \%$ of average for the elementary school group.

## Projected Capital Project Requirements

It is recommended the windows be scheduled for replacement in 5 to 8 years, (Priority Two).

Information Re Section (6) Zoning Policy
Southern Kings Consolidated School boundaries should remain intact except for the area in Caledonia. In this section the Southern Kings boundary is recommended to the reduced from its present position on the eastern side of the Wood Islands Road Route \#315 and intersection of Highway \#24 and thence southward along the eastern side of the Wood Islands Road Route \#315 until it reaches the present boundary of the Southern Kings Consolidated School which is also on the eastern side of the Wood Islands Highway Route \#315. Both sides of the Wood Islands Highway Route \#315 and all territory west of this highway would now be served by Belfast Consolidated School.

The attendance zone reassigned from Southern Kings will now be part of Belfast Consolidated School.

In 1990-91 the attendance at Southern Kings was 409. This present year the attendance at Southern Kings is 377.

There is no indication that there will be any increase or decrease in the population in this area over the next five years.

The optimum enrollment at Southern Kings is 400 to 425 students. With this in mind, no new area could be added to the school because even modest increase in population will put the school beyond optimum student numbers.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The present bussing system at Belfast passes by the area which is now being reassigned to Belfast. These busses will be able to accommodate the thirteen pupils involved in this re-zoning.

There will be no educational impact from this rezoning.

There will be little financial impact from this small change. There may be some slightly positive improvements in the routing of the busses.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## SPRING <br> PARK ELEMENTARY SCHOOL

## Overview

Spring Park Elementary School was constructed in 1958. The building is in reasonably good condition. New windows have been installed approximately five years ago. The roof was replaced about 5 to 10 years ago.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 540 students.

## Capacity Enrolment

Capacity enrolment is determined to be 600 students.

## Building Code Standards

The building generally accommodates the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

No handicapped access is provided to any of the three levels.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present Spring Park Elementary School is being utilized at $104 \%$ of its optimum student population.

## Building and Maintenance Costs

Spring Park Elementary School is being maintained at below average building and maintenance costs.

## Electrical Costs

Spring Park Elementary School is running at below average for the elementary school group.

## Fuel Costs

Fuel costs run slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are below average for the elementary school group.

Projected Capital Project Requirements
A handicapped ramp should be installed together with a lift, (Priority Two).

Information Re Section (6) Zoning Policy
Spring Park School has served as the Early French Immersion school in the Colonel Gray family of schools for the past number of years. It is now recommended that Spring Park School in the new distribution discontinue serving as the Early French Immersion School. West Royalty School has been recommended to close. The closest school to serve the West Royalty area is Spring Park. When the West Royalty students move to Spring Park, there will be insufficient space to conduct the French immersion students as well as all the new regular students. The new recommended boundary for Spring Park School is as follows:

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

Beginning on the east side of the North River eastwardly along the northern boundary of the new West Kent boundary then along the northern boundary of the new St. Jean boundary to University Avenue, thence along the west side of University Avenue and Malpeque Road to the intersection of the Sherwood Road and the Malpeque Road, thence west on the Sherwood Road to the intersection of the Sherwood Road and Lower Malpeque Road, then northerly along the Lower Malpeque Road to the intersection of the Lower Malpeque Road and the Royalty Road, thence westerly on the north side of the Royalty Road to the North River, and thence southerly along the shoreline to the place of commencement.

All the students in the regular program within the boundaries listed above will attend Spring Park School.

This present year the population at Spring Park is 557. This population fills the school beyond its optimum capacity. The new zoning for Spring Park will place 487 students in this school.

There is no indication that there will be a major increase or decrease in population in this area over the next five years. Present trends suggest some minor increase. There is provision in Spring Park for an increase in enrollment. The suggested boundary adjustment will have 487 students in the school. During the next five years this school will be able to accommodate all the students from this area.

The optimum enrollment at Spring Park is 540 students. The present enrollment will allow a growth increase of about $121 / 2 \%$. Looking at the next five years, this will be more than adequate to ensure that this school does not have an overflow of students.

There are no known statistics regarding new approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

Students living outside the one kilometre limit will receive transportation from designated pick-up points.

Students will feel no educational impact from this re-zoning.

The financial impact from this change is difficult to measure in isolation. This is part of the whole reorganization recommended for the city area which will have a substantial financial impact saving.

Enrollment History

District: Eastern
School: Spring Park (351)

## Pupil Counts by Grade

## Grand Total for all Schools

## TRACADIE <br> CROSS <br> CONSOLIDATED SCHOOL

## Building and Maintenance Costs

Tracadie Cross Consolidated School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Tracadie Cross Consolidated School is running at above average for the elementary school group.

## Fuel Costs

Fuel costs run at slightly below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

## Projected Capital Project Requirements

It is recommended that the heat control system be upgraded. Because the school is very much a community based school, no change in the gymnasium should be made at this time.

## Information Re Section (6) Zoning Policy

Grand Tracadie Consolidated School is recommended for permanent closure. Because of its location, students from this school will be divided between L. M. Montgomery and Tracadie Cross. Due to student numbers at L. M. Montgomery and efforts to streamline the transportation system, students on the Bedford Road now zoned to L. M. Montgomery and Charlottetown Rural High School will be reassigned to Tracadie Cross Consolidated and Morell Regional High School. The boundary of

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

Tracadie Cross Consolidated will be described as follows: the western boundary of Mt. Stewart Consolidated from the North Shore to the Hillsborough River, thence along the north bank of the Hillsborough River, thence across the St. Peter's Highway between the intersection of St. Peter's Highway and Route \#260 and the intersection of the St. Peter's Highway and Route \#6, thence in a northerly direction to cut through the intersection of the Pleasant Grove Road Route \#220 and the Bedford Road, Route \#6. All students to the east of the line from the St. Peter's Highway to the intersection of the Pleasant Grove Road Route \#220 and the Bedford Road Route \#6 will be in the Tracadie Cross Consolidated School zone.

All students in area described above will be assigned to Tracadie Cross Consolidated School.

In 1990-91 the student population in Tracadie Cross was 105. This present school year 1996-97 the population in Tracadie Cross is 113 students.

There is no indication that the student population in this area will increase or decrease over the next five years.

Tracadie Cross Consolidated School can accommodate 175 students. The net gain in students from the Bedford Road and the Grand Tracadie portion will be 48 students. This will put 161 students in Tracadie Cross, which is well below the number that the school can easily accommodate.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The students who are changing zones will be accommodated by the present bussing system in Tracadie Cross Consolidated.

The impact of this reassignment of students will increase opportunity for both the students of Grand Tracadie and Tracadie Cross. Those now
attending L. M. Montgomery should see a continuation of the programs that they are now participating in at present.

The financial impact of this reassignment will be the removal of the busses now serving Charlottetown Rural, L. M. Montgomery, Stonepark Junior High and Grand Tracadie from the Bedford Road. The exact financial saving is difficult to establish; however, it should be about equivalent to the costs associated with one school bus. This will mean a saving of $\$ 35,000$ per year.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

## VERNON <br> RIVER CONSOLIDATED

## Overview

Vernon River Consolidated School was originally constructed in 1971. Heating and ventilation systems have not been designed to accommodate the now closed in open concept building. The windows are in need of replacement. Washrooms require ventilation.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 375 students.

## Capacity Enrolment

Capacity enrolment is determined to be 400 students.

## Building Code Standards

The renovation to the building has generally accommodated the intent of the National Building Code.

## Handicap Access

The building is handicapped accessible.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the elementary program.

## Space Utilization

At present Vernon River Consolidated School is being utilized at $69 \%$ of its optimum student population.

## Building and Maintenance Costs

Vernon River Consolidated School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

Vernon River Consolidated School is running at about $75 \%$ of average for the elementary school group.

## Fuel Costs

Fuel costs are about $125 \%$ of average for the elementary school group.

## Total Operation and Mainfenance Costs

Total operating and maintenance costs are at about average for the elementary school group.

## Projected Capital Project Requirements

It is recommended that the ventilation system be revised to accommodate the revised planning. New windows should be installed, (Priority One).

## Information Re Section (6) Zoning Policy

Glen Stewart School at present is overcrowded. Vernon River Consolidated can easily accommodate 375 students. In order to ease the overcrowding at Glen Stewart, we recommend that the Vernon River boundary be extended westward from the division between Village Green and Mt. Mellick to the intersection of the Waterside Road and the Pownal Road Route 1A, thence northward to the intersection of the 48 Road Route \#5 and the Trans Canada Highway Route \#1, thence along the 48 Road Route \#5 to
the intersection of the 48 Road Route \#5 and the Monoghan Road Route \#213 and thence south to the present boundary of Vernon River School.

Vernon River Consolidated School will receive 120 students who were originally in Glen Stewart.

In 1990-91 the population of Vernon River School was 259 students. In 1996-97 the population of Vernon River School is 219 students.

There is no indication that there will be any increase or decrease in the school population in the Vernon River area over the next five years. The same is true for the area which will be reassigned to the Vernon River School.

Vernon River School can easily accommodate 375 students. The net gain in students from the zoning change is 120 students. This will increase the population in Vernon River to 339 students. This is well below the optimum capacity of the school. The High School students in this area will be zoned to Montague Regional High School. The numbers involved in this re-zoning will compensate Montague for teritory lost to Morell and Souris.

There are no known statistics regarding approved residential subdivisions in this area.

At present there are no known plans for any significant industrial development in this area.

The bussing system which now carries these students to Glen Stewart will have to be integrated with the Vernon River buses to efficiently carry out the transportation of the students. At present there is overlapping of bussing in this area as Vernon River buses come as far as the Gay Road to transport students.

There will be very little impact on the educational program at the affected schools. The population in Glen Stewart will become more manageable within the present building and Vernon River will be closer to optimum student numbers and hence will be able to operate more efficiently.

The major financial impact will be the fact the building at Glen Stewart will not be necessary. Both schools will now have student numbers which are optimum for operation. This will result in increased efficiency which will result in an overall cost saving which is difficult to measure until such time as the re-zoning is accomplished. This rezoning will also lead to more efficient bussing arrangements. As time passes this area will be served by fewer busses.

# WEST <br> KENT <br> ELEMENTARY SCHOOL 

## Overview

West Kent Elementary School was originally constructed in 1963. The building is generally in good physical condition. The roof of the gymnasium needs replacement. Windows are original and are showing signs of age. No ventilation system is present. The gym lights should be replaced with a more energy efficient type.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 400 students.

## Capacity Enrolment

Capacity enrolment is determined to be 400 students.

## Building Code Standards

The renovation to the building has accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The recent renovation made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accommodate the junior high program.

## Space Utilization

At present West Kent Elementary School is being utilized at $106 \%$ of its optimum student population.

## Building and Maintenance Costs

West Kent Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

West Kent Elementary School is running at well below average for the elementary school group.

## Fuel Costs

Fuel costs are below average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are below average for the elementary school group.

## Projected Capital Project Requirements

It is recommended that planning begin for the replacement of the windows, gym roof, and relighting of the gym, (Priority Two).

## Information Re Section (6) Zoning Policy

West Kent School at present has students from the Charlottetown area as well as the West Royalty area and the Winsloe area. It is recommended that West Kent in future receive students from the following two areas:

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

West Kent: Beginning at the east side of the North River, thence to south of the intersection of Edinburgh Drive and Colonel Gray Drive, then in the same direction to the intersection of Colonel Gray Drive and North River Road, then southward to the intersection of McGill Avenue and McGill Terrace, then southwardly on the East Side of Ambrose Street to a point to the north of Brighton Road and then eastwardly through the intersection of Euston Street and Rochford Street, and then on the east side of Rochford Street in a southerly direction to the shoreline.

Winsloe: Students in the area beginning at a southeastern boundary of Central Queen School and the new Spring Park boundary, then north along the eastern boundary of Central Queens School to the southern boundary of Gulf Shore School, then easterly along the southeast boundary of Gulf Shore school to the Western boundary of the Brackley Point Road area, then south along the westem boundary of the Brackley Point Road area to the north boundary of the new Sherwood School, then westerly along the Sherwood boundary and the new northern boundary of Spring Park School to the place of commencement will attend West Kent school, Queen Charlotte/Birchwood Intermediate School, and Colonel Gray Senior High.

Hillsborough Development: Students in the area known as Hillsborough Development beginning at the intersection of Riverside Drive and St. Peter's Highway then southward along Riverside Drive to Point south of the intersection of the Kensington Road and Riverside Drive then easterly on the north side of Westridge Crescent to the Mill Dam then northerly along the west bank of Andrew Dam to the St. Peter's Highway then westerly south of the St. Peter's Highway to the point of commencement will attend West Kent Elementary, Queen Charlotte/Birchwood Intermediate and Colonel Gray Senior High School.

All students in the zones described above will attend West Kent except those students in French Immersion who will attend St. Jean and those
students who received written Board Office approval to attend elsewhere for specific reasons.

During the past five years, the enrollment at West Kent has varied from 381 to 407 . The new zoning arrangement will provide a population of approximately 420 students.

During the next five years, data indicates that the student population will decrease a slight amount.

There will be adequate space in this school for years to come. The school is capable of holding 400 students.

Construction is possible in one part of the area assigned to this school. There are no available statistics to indicate that significant new construction will take place.

At present there are no known plans for any significant industrial development in this area.

Students in the Winsloe area are bussed at present. This service will continue.

There will be no educational impact from this rezoning.

There will be overall financial gain in a more streamlined bussing system for the whole area. It is difficult to project. The exact amount to be realized from this school alone.

## WEST <br> ROYALTY <br> ELEMENTARY SCHOOL

## Building and Maintenance Costs

West Royalty Elementary School is being maintained at slightly below average building and maintenance costs.

## Electrical Costs

West Royalty Elementary School is running at about $300 \%$ of average for the elementary school group.

## Fuel Costs

Fuel costs are about $50 \%$ of average for the elementary school group.

## Total Operation and Maintenance Costs

Total operating and maintenance costs are at about $200 \%$ of average for the elementary school group.

## Projected Capital Project Requirements

Given the building disposition, no recommendation is made at this time.

## Building Disposition

It is recommended that West Royalty Elementary School be closed and the students moved to Spring Park.

## Information Re Section (2) Policy

If West Royalty had an adequate facility there would be sufficient students to offer a quality program. Even with the facility restrictions that are present, West Royalty is providing quality programs to 176 students. The local parents' group is very active and supportive within this

## Overview

West Royalty Elementary School was constructed as a wood frame building. Subsequent additions of mobiles have more than doubled the built area. Most of the windows, doors and roof require repairs.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 200 students.

## Capacity Enrolment

Capacity enrolment is determined to be 225 students.

## Building Code Standards

The building has not accommodated the intent of the National Building Code and the City of Charlottetown building by-laws.

## Handicap Access

The building is not handicapped accessible.

## Adequacy for Program Delivery

The building as designed is not suitable to accommodate the elementary program.

Space Utilization
At present West Royalty Elementary School is being utilized at $102 \%$ of its optimum student population.

## EASTERN SCHOOL DISTRICT FACILITY REVIEW

school community. This places the school in a position of prominence within the community.

The school building is very inadequate in West Royalty. The main school building actually represents the smallest amount of space utilized by this school. The majority of students are housed in mobile rooms which are in a state of deterioration. Gymnasium facilities are available at the Community Centre which is located across the street.

There is adequate classroom space available within other schools in the Charlottetown area. The thrust of this review will be suggesting a reorganization of students in the Charlottetown area. This reorganization will provide space in a neighbouring school for the West Royalty area.

The students from this area will be reassigned to schools which will have student numbers to offer a program which will be more comprehensive than what is now available. The closure will not have a major impact on any receiving school. The receiving school will naturally have a reorganization of students who attend. The impact on the community and parents will be the greater distance the students have to travel to school. However, this greater distance should not cause major inconvenience as it will only be a few kilometres from where students are presently housed.

In 1990-91 the enrollment at this school was 151 students. In the present year the enrollment is 176 students. As the facility now exists, this is about maximum enrollment.

Over the years students from this area have attended other schools, principally West Kent. During the next five years this practice would have to continue, not necessarily to West Kent, but to some school outside the West Royalty area.

There have been numerous studies and projections on the population of this area for the future. It would appear that the population will increase somewhat; however, the student numbers are not projected to increase
significantly. in the greater Charlottetown area we have sufficient classroom spaces to accommodate the increase in population that we can expect over the next few years.

At present there is a steady build in approved residential subdivisions. There are indications that new subdivisions will be opened; however, there are no known projections which indicate large increases in student numbers in this area.

At present there are no known plans for major commercial or industrial development in this area. The West Royalty Industrial Park is located in this area. The growth of industry here is not indicated to increase significantly over the next five years.

Students will be zoned to alternate school areas within the Charlottetown area. The area will be served by a neighbouring school following a complete reorganization of area schools. This matter is discussed under the re-zoning of the area schools later in this report.

When the students are all bussed to an alternate location, the one bus which is assigned to this school will no longer be required. The financial saving which will be accumulated from this reorganization will be:
(a) $\$ 35,000$ per year for the elimination of the bus,
(b) $\$ 42,112.04$ per year due to the closure of the facility.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## WESTWOOD <br> PRIMARY SCHOOL

## Overview

Westwood Primary School was constructed in 1991. The building is in very good physical condition. No problems were reported or observed with the major building systems.

## Optimum Student Enrollment

The optimum student enrolment is determined to be 420 students.

## Capacity Enrolment

Capacity enrolment is determined to be 450 students.

## Building Code Standards

The design of the building has accommodated the intent of the National Building Code.

## Handicap Access

The design of the building has made allowance for handicap access both into and throughout the building.

## Adequacy for Program Delivery

The building as designed is suitable to accomodate the elementary program.

## Space Utilization

At present Westwood Primary School is being utilized at $93 \%$ of its optimum student population.

## Building and Maintenance Costs

Westwood Primary School is being maintained at well below average building and maintenance costs. This is understandable for a new building.

## Electrical Costs

Westwood Primary School is running slightly above average for electrical costs. This is likely resulting from the four mobiles being heated electrically.

## Fuel Costs

Fuel costs are slightly below average for the elementary school group.

## Total Operating and Maintenance Costs

Total operating and maintenance costs are slightly below average for the elementary school group.

## Projected Capital Project Requirements <br> No capital expenditure is anticipated.

There is no recommendation for change in the boundaries served by these three schools. In total these schools accommodate 1452 students. The populations are as follows:

| East Wiltshire | 622 |
| :--- | :--- |
| Eliot River | 407 |
| Westwood | $\underline{423}$ |
|  |  |

These schools along with Bluefield High School, are served by 31 school buses. When the student body at Bluefield is included in the student population for the area, we have 2349 students. The area from Hampshire to Warren Grove, to York Point to Clyde River, and back to Hampshire has 1170 of these students. We recommend that 324 of these students are within walking distance
of the schools they attend. We also recommend that the remaining 846 be served with double bus runs. This should be possible with a minimum of supervision at the schools. The principals and Transportation Supervisor would meet and discuss starting and dismissal times to accommodate this recommendation. If this were to be accomplished, a fleet of 23 buses will be adequate. Seventeen of these buses will have to make double runs. Once these double runs are completed, twenty-three buses will be adequate to accommodate the remaining 1134 students. This will result in a fleet decrease of eight buses. Each bus will result in an yearly saving of $\$ 35,000$. This will mean a total yearly saving of $\$ 280,000$.

# EASTERN SCHOOL DISTRICT FACILITY REVIEW 

## MONTAGUE BOARD OFFICE

In 1994, the old School Unit \#4 and School Unit \#3 were combined to form the Eastern School District. The new school board then found itself with two board offices. While no formal arrangement was made, there was an expectation that board presence would be maintained in both geographic areas in some form. Most of the board business and operations have been either kept in place in the Linden Avenue office or transferred to that office.

At the present time, the Property Services Supervisor and two secretaries occupy a portion of what was originally the Unit \#4 board office. The Department of Education is providing the office space and is paying a space rental fee. Many people desire that the board presence be maintained in the eastern area of our district. At this time, it is very difficult to justify the rental cost when so much under utilized space is available to the Board.

We recommend that the present board facility in Montague be closed and that provision for the board presence in the area be provided in the new construction recommended for the Montague intermediate School. In the meantime, there are various schools in the area which have space available to fulfill this presence. It is desirable that this space be provided in the Montague area due to its central location. The present Montague Consolidated School is operating at approximately optimum capacity from a study standpoint, however, we
feel that space for this office requirement could be made available with a minimum of alterations and cost for an interim period in this building. A cost of $\$ 10,000$ has been allocated for this relocation, Priority 1.

# EASTERN SCHOOL DISTRICT 

## POLICY STATEMENT

SUBJECT: Permanent School Closure

DATE OF ADOPTION: November 8,1995

## EFFECTIVE DATE: November 8, 1995

SUPERSEDES: Former Unit 3 and Unit 4 Board Policy Related to This Topic CROSS REFERENCE:

PAGE:
1 of 2

This policy is established pursuant to School Act Permanent Closure of Schools Regulations, No. EC355/95.

It shall be the policy of the Eastern School District Board to monitor the growth and decline of school populations in all areas of the School District. The intent of the policy is to provide quality education to each student who attends school within the Eastern District. Where the population of a school has declined to a point where delivery of adequate programs is difficult and the financial operation of the school becomes unviable, the Board will consider closure of the school.

The administrative procedures regarding permanent school closure are as follows:

1. For the purpose of this policy, permanent closure of a school means a decision to cease the operation of a school and to accommodate all the students in another school or schools.
2. The Superintendent shall present, prior to December 31 in each school year, a report concenving the permanent closure of schools and, if any school is identified for consideration of permanent closure, the report shall contain, for each school identified, the following information:
(a) the strengths and deficiencies which exist in the educational program at the school;
(b) the condition of the school building;
(c) the availability of space in other school buildings;
(d) the impact of the closure of the school on the educational program at the school, on schools which are designated to accommodate students from the school, and the impact of school closure on parents, students and the general community;
(e) the student enrolment at the school for the previous five years;
(f) the projected enrolment at the school for the next five years;
(g) projected changes in the population for the area served by the school for the next five years;
(h) any available statistics concerning approved residential sub-divisions available for new residential construction;
(i) any available information concerning plans for commercial or industrial development in the geographical area served by the school;
(j) a zoning and transportation plan for affected students;
(k) a financial analysis which includes a projection of both costs and savings which would result from the closure of the school.
3. In the case where a School Board has taken a final decision respecting the permanent closure of a school, the Board shall establish a transition committee to plan for the orderly relocation of affected students.

It shall be the policy of the Eastern School District to establish school zones which best serve the student population of the School District. These zones will be established in such a manner that the transportation system operates effectively and efficiently, and at the same time meet the best educational needs of the student population.

The administrative procedures regarding school zones are as follows:

1. For the purpose of this policy, school attendance zone means a defined geographical area within the School District.
2. Students are assigned to attend school by attendance zones.
3. Notwithstanding Section 3, the Superintendent may authorize a student to attend a school other than the school to which the student is assigned.
4. Prior to adopting changes in the boundaries of school attendance zones or changing the school which serves students in a particular school attendance zone, the procedures described in Sections 5 to 10 shall be followed.
5. If changes are to be considered for the following school year, the Superintendent shall present to the School Board, prior to December 31, a report concerning
(a) proposed changes in boundaries of school attendance zones;
(b) proposed changes in the assignment of attendance zones to a school or schools;
(c) proposed changes in the grade configurations at a school.
6. The report referred to in Section 5 shall contain, for each school attendance zone identified, the following information:
(a) any proposed change in the boundary of the school attendance zone;
(b) the school or schools to which the school attendance zone will be assigned;
(c) the school population in the school attendance zone for the past five years;
(d) the projected school population in the school attendance zone for the next five years;
(e) the availability of space in school buildings affected by the proposed changes;
(f) any available statistics concerning approved residential sub-divisions available for new residential construction;
(g) any available information concerning plans for commercial or industrial development in the geographical area served by the school;
(h) a transportation plan for the affected students;
(i) the impact of the proposed changes on the educational program at the affected schools;
(j) a financial analysis which includes a projection of both costs and savings which would result from the proposed changes;
7. The School Board shall, prior to December 31, table the report of the Superintendent at a regular meeting of the School Board and release the report for public input.
8. In the case where a report has been tabled at a regular board meeting and released for public input, the Board shall establish a transition committee to plan for the orderly relocation of affected students.
9. The School Board shall assure public access to the report by providing examination copies at school board offices and other locations convenient for the public and by providing a reasonable number of copies that can be obtained by residents of the District either without charge or at a price not greater than the cost of printing the report.
10. (1) At least three months shall be provided for public input following the public release of the report and the School Board shall provide for the receipt of written briefs and the holding of at least one public meeting to consider the report.
(2) Notice of the invitation for briefs and the holding of the public meeting pursuant to subsection (1) shall be given through an advertisement which appears in a newspaper having general circulation in the District and shall be published at least three times, with the first notice appearing at least four weeks before the deadline for receipt of briefs and the date of the public meeting.
11. The School Board shall take its final decision regarding any changes in school attendance zones not later than May 31 of the year immediately preceding the school year in which the changes in the attendance zones will take place.
12. The School Board shall instruct the principals of the schools receiving students who changed schools as a result of a change in school attendance zones to prepare a report which shall be submitted to the School Board not later than December 31 in the year in which attendance zones were changed. This report shall include the identification of issues or special circumstances arising from the change in attendance zones.

## POLICY STATEMENT

SUBJECT:
DATE OF ADOPTION:

EFFECTIVE DATE:
SUPERSEDES:
CROSS REFERENCE: No. EC 69/96 School Act Regulations:
Students and Parents Regulations - Section 3
PAGE:
1 of 3

The transportation policy of the Eastern School District is designed to regulate the conveyance of the Eastern School District pupils who live outside walking distance from the school to which they are zoned. Bus routes will be established on government-maintained public roads. The system will be organized to provide safe, efficient and economical transportation.

The Eastern School District will enforce the following transportation regulations:

1. Students living within one (1) kilometre of the school to which they are zoned will not be provided transportation services provided that the roadway to and from school provides safe walking conditions. Secondary students who attend junior and senior high schools and who live within one and six tenths (1.6) kilometres of the school to which they are zoned will not be provided transportation services provided that the roadway to and from school provides safe walking conditions. Pupils who are provided transportation services under this section and who live within five (5) kilometres of the school to which they are zoned will ordinarily be served with a double bus run.
2. Students who are provided transportation services will board school busses at stops designated by the Transportation Supervisor in consultation with the Principal(s) and bus driver(s) involved. Stops will be designated with the safety of the student(s) as the primary concern. It is also expected that in the designation of bus stops, every effort will be made to establish a reasonable walking distance between collection points. The criteria for designating stops will include the traffic volume on the highway concerned as well as the suitability of the road to accommodate the walking public. The decision on the location of bus stops will allow for input solicited from the parent group which serves the school.
3. Any student who misuses the privilege of transportation in any way may face a suspension of transportation privileges. It is understood that the bus driver is in complete authority on the school bus, and misconduct will be recorded on a form prescribed by the Transportation Supervisor. In cases of misconduct, the school principal is empowered to settle the problem at his/her level. Should the problem persist or be of a serious nature, the Transportation Supervisor is to be contacted.
4. All bus drivers must provide secure and adequate parking, as approved by the Transportation Supervisor. For those drivers employed or transferring after the adoption of this policy, the parking location shall not be more than eight (8) kilometres from the beginning of the bus route. The bus route will begin where the Transportation Supervisor approves the pick-up of the first student. During the school day, busses are to be parked at their base school unless the Transportation Supervisor authorizes them to be parked elsewhere.
5. On a yearly basis prior to June 30, or at any other time throughout the year should conditions change, the Transportation Supervisor, in consultation with the school principal(s) and the bus driver(s) shall review the bus routes serving the school. This review is to ensure the most safe and efficient use of the transportation system. Notice will be given to parents thirty (30) calendar days prior to any change(s) in bus routing except in the case of an emergency.
6. The Director of Business Operations shall be responsible for the general supervision of the transportation system and the Board employees who operate within the transportation system.

The Transportation Supervisor shall be responsible for the provisions of this policy that relate to him/her and also for the fulfilment of the job description as provided in Administrative regulations.

The Principal shall be responsible to follow the provisions of this Policy and duties as outlined in the School Act and Regulations.

The bus drivers shall be responsible to follow the provisions of this Policy and the School Act and Regulations.
7. The Director of Instruction/Student Services will identify and recommend transportation for special needs students who require services in addition to or in place of the regular transportation service provided. The specifics of the transportation will be determined by the Transportation Supervisor.
8. Students may be required to transfer between busses at the discretion of the Transportation Supervisor and the principal(s) involved.
9. All students who receive transportation privileges under this policy are assigned to travel on a specific bus for both mornings and afternoons. If a student wishes to travel on any other bus, permission must be sought by the student's parent(s) or guardian(s) from the student's principal who will in turn inform the bus driver(s) of the change.
10. Notwithstanding sections $1-9$, the Superintendent of Education may authorize exceptions on an individual basis to students who may require transportation due to exceptional circumstances.
11. Appeals concerning the transportation of students shall be subject to the procedures established in section 79 of the School Act and Board Policy.

Board Chairperson

Superintendent of Education
